Every Day in Oklahoma

- 135 babies are born
 - 7 of the babies are born to children
 - 8 of the babies are born with inadequate prenatal care
 - 10 of the babies are born too small
- 165 incidents of child abuse and/or neglect are investigated
 - 43 incidents are confirmed to be child abuse and/or neglect
- 26 children quit high school without graduating
- 78 children are arrested for a crime
 - 3 of those are arrested for a violent crime
- At least 2 children will die
 - 1 of those will be a baby

The Oklahoma KIDS COUNT Partnership includes

Lead Agency

Oklahoma Institute for Child Advocacy
Anne Roberts, Executive Director, Oklahoma KIDS COUNT Project Director
Marlo Nash, Oklahoma KIDS COUNT, Project Consultant
Ann Salazar, Oklahoma KIDS COUNT, Project Coordinator
Julianna Osuna, Oklahoma KIDS COUNT, Project Assistant

Data Analyst and Writer

Ingraham & Associates, PLLC

A State Profile

Overview & Findings

Every Oklahoma child deserves a good start, a childhood free from the hardships of poverty and a future brimming with hope. Growing up in a supportive, economically stable family gives each child his or her best chance.

This 2002 edition of the Oklahoma KIDS COUNT Factbook focuses on welfare reform. The *Personal Responsibility and Work Opportunity Reconciliation Act of 1996*, was an ambitious federal effort to influence the most basic and complex human behaviors — work, childbearing, marriage — and provide each child that supportive, economically stable family. The 1996 welfare reform became a watershed event for children living in poverty. It redirected policy and funding, and changed the terms of their lives. The 2002 Factbook begins the assessment of whether Oklahoma children are benefitting or suffering from welfare reform.

It is time to take measure. During the summer of 2002, welfare reform is again being debated and amended. Soon after, Oklahoma will again restrict or enhance its local welfare-to-work program to accommodate the resulting mix of federal mandates and take advantage of whatever flexibility states are allowed to exert.

Oklahoma families raise and nurture Oklahoma's children. As families suffer or prosper, children will suffer or prosper. The health of the economy and the result of the next round of welfare reform will combine to determine which outcome is more likely. The first round of welfare reform found its successes fueled by a boom economy; Oklahoma may not be so lucky next time. Regardless of public perceptions about welfare, if the resulting welfare system fails its recipients, it will fail their children. If the cycle remains unbroken, Oklahoma's future dims.

The Oklahoma KIDS COUNT Partnership, a project of the Oklahoma Institute for Child Advocacy (OICA), uses key strategies to achieve its goal. First, KIDS COUNT “counts kids,” providing accurate and up-to-date data on the status of Oklahoma's children and youth. Second, KIDS COUNT cultivates leadership on behalf of children and youth, giving voice to their needs at the local level. Third, KIDS COUNT communicates the needs of children and youth, using extensive public awareness activities.

Oklahoma families raise and nurture Oklahoma's children. As families suffer or prosper, children will suffer or prosper.

The Oklahoma KIDS COUNT Factbook uses benchmarks to profile the status of children and youth in our state. Benchmarks are quantifiable measures that, when taken together, help determine child, family and community well-being. The seven benchmarks in the 2002 KIDS COUNT Factbook are **low birthweight infants, infant mortality, births to young teens, child abuse & neglect, child death, high school dropouts and juvenile violent crime arrests.**

From an established baseline, this seventh Oklahoma KIDS COUNT Factbook continues to track progress, or the lack of progress, for each benchmark over time. Progress requires action. Progress requires using all of this information — and more — to make good decisions about state and community budgets and programs that affect children and youth. Effective programs and policies work together with strong communities and families to improve the benchmarks.

Almost nine hundred thousand (892,360) Oklahomans — one in every four (25.9%) — are children. Last year's Oklahoma KIDS COUNT Factbook (2001) shared the good news that only two (low birthweight infants and child abuse & neglect) of the seven benchmarks tracked worsened when compared to data from a dozen years ago. Most young people in Oklahoma were doing well most of the time.

Good news continues. The 2002 Oklahoma KIDS COUNT Factbook again reveals that only two of the seven benchmarks tracked worsened when compared to data from the middle of the 1980's:

- **Low birthweight infants**
- **Child abuse & neglect**

Five benchmarks again improved over the comparable older data:

- **Infant mortality**
- **Births to young teens**
- **Child deaths**
- **High school dropouts**
- **Juvenile violent crime arrests**

Bad news remains. The improved rates obscure the challenges faced by large numbers of young Oklahomans each year. One in every five (19.1%) Oklahoma children lives in poverty. Each year, almost sixteen thousand (15,733) children are abused or neglected. Each year, almost ten thousand (9,406) youth quit high school. Each year, more than one thousand (1,035) children and youth are arrested for murder, rape, aggravated assault or robbery.

Oklahoma

Number of Children (2000): 892,360

Children are 25.9% of the state population

Child Poverty Rate (2000): 19.1%

a state focus on The Welfare of Oklahoma's Children After Welfare Reform

In 1996, welfare reform forever changed public assistance, impacting the lives and futures of children living in poverty. In 2002, the KIDS COUNT Factbook takes this initial look at how poor children are faring under Oklahoma's welfare reform.

Children on TANF (FY2001): **49,146** (5.5% of all children)

Children on TANF per 100 poor children (FY2001): **30**

51,528 fewer Oklahoma children received TANF **each month** during FY2001 than received AFDC before 1996 welfare reform

33.1% of children on DHS child care subsidies received child care in 2- or 3-Star facilities (April 2002)

Income from a minimum wage job (\$5.15 per hour) provides **34.2%** of **\$15.05**, the average hourly wage a single parent with one preschool and one school age child would need to earn in a full time job in order to be self-sufficient in a **metropolitan** county in Oklahoma

Income from a minimum wage job (\$5.15 per hour) provides **44.7%** of **\$11.51**, the average hourly wage a single parent with one preschool and one school age child would need to earn in a full time job in order to be self-sufficient in a **non-metropolitan** county in Oklahoma

See County Benchmarks (pages 31 - 69) for comparable information on each Oklahoma county.

Some ideas are supported both by common sense and by research. Oklahomans know, and well-accepted evidence demonstrates, that children do best when they live in supportive, two-parent families that earn enough to meet their needs. The challenge facing Oklahoma and the nation is to determine how to best help children who do not have the support of both parents and who live in families that do not have enough income. Too many Oklahoma children experience one or both situations. Half will spend some part of their childhood living with a single parent. More than one-third will spend some part of their childhood living in poverty. Oklahoma's success or failure will be measured by the welfare of our children.

How Are Children Faring Under Welfare Reform?

The well-being of children is the most important concern for Oklahoma's welfare policy. Reform of the welfare system can either hurt or help children. Welfare reform has changed their family's income. It has changed their family's ability to provide basic needs. It has changed their need for and access to basic services. It has changed the risks to which they are exposed. It has changed the level of their parent's stress. The changes may be good or bad, intended or unintended. What do we know about how Oklahoma's children are faring now? Has welfare reform enabled more Oklahoma children to live in supportive, two-parent families that earn enough to meet their needs?

For an explanation of terms related to welfare reform, see pages 73-74.

The combination of strong economic growth, low unemployment rates, and TANF's focus on work and responsibility, helped many former recipients leave welfare. In State Fiscal Year 1996, before TANF was initiated, nearly one hundred eleven thousand (110,902) Oklahomans received welfare cash assistance every month. Today's caseloads are only a third as large with more than fifty thousand (51,528) fewer children and twenty-five thousand (25,151) fewer of their parents receiving benefits each month. Measured only by decreased caseloads, welfare reform is a success.

Welfare Cash Assistance (AFDC/TANF)
Average Monthly Caseloads, Oklahoma, FY1996-FY2001

More of Oklahoma's poor are working. Employment rates for families leaving TANF cash assistance increased as Oklahoma's program matured from its beginnings (Federal Fiscal Year 1997). A growing proportion of families are leaving TANF in order to take paid employment (30.1% FFY 1997, compared to 47.4% in FFY 2000). A greater proportion of families are finding work after leaving welfare. Currently around sixty percent (62.1% in FFY 1999;

Welfare Before 1996 Reform

Before welfare reform changed the landscape, all families and children who met state eligibility criteria were "entitled" to receive cash assistance — Aid to Families with Dependent Children (AFDC). Many states, including Oklahoma, set the financial eligibility so low that only the poorest families qualified. Oklahoma was reimbursed by the federal government for at least half of the assistance provided. This federal cost sharing was unlimited. An Oklahoma AFDC recipient had direct access to Medicaid and food stamps. Even before welfare was reformed nationally, Oklahoma and several other states were well on their way to changing welfare programs into jobs programs. If the recipient participated in an AFDC-work program and the funding allowed, child care assistance might be provided. Most AFDC mothers stayed home and cared for their children themselves.

While there was broad agreement that this sixty-year-old system did not work well, there was little agreement about why. Some felt it encouraged young women to have babies outside of marriage and young men to abdicate their responsibilities. Some felt it discouraged work and was too expensive. Others felt its low benefits, lack of effective services, and strict punishments trapped families in poverty. Some felt decisions best made by the state were made at the national level. Recipients themselves disliked welfare, preferring the basic dignity derived from paid work and self-sufficiency.

1996 Welfare Reform:

An ambitious federal effort to reduce the number of children growing up in poor, single-parent families, the *Personal Responsibility and Work Opportunity Reconciliation Act of 1996* sought to promote marriage, reduce teen pregnancies and require mothers to move from welfare to work. At its most basic, the 1996 law transformed public welfare into an employment program. AFDC became TANF — Temporary Assistance for Needy Families. Entitlement to benefits ended. Links between cash assistance, Medicaid and food stamps were severed. Families receive TANF cash assistance for no longer than sixty (60) months and have to meet stringent work requirements, with serious sanctions for noncompliance. Oklahoma recipients must immediately be available to work and are required to spend thirty (30) hours in work or work-related activities. Child care funding was increased so mothers could work. Child support enforcement programs were strengthened so fathers would contribute to the support of their children. With the new focus on work and responsibility, Oklahoma and other states received increased flexibility to design their own programs. Even though there was broad agreement that change was needed, the sweeping welfare reform was accompanied by dire predictions of families becoming destitute without welfare and children being forced into foster homes.

Stated Purposes of the *Personal Responsibility and Work Opportunity Reconciliation Act of 1996*:

1. Providing assistance to needy families so that children may be cared for in their own homes or the homes of relatives
2. Ending the dependence of needy parents on government benefits by promoting job preparation, work and marriage
3. Preventing and reducing the incidence of out-of-wedlock pregnancies and establishing annual numerical goals for both purposes
4. Encouraging the formation and maintenance of two-parent families

59.4% in FFY 2000) of Oklahoma families moving off TANF become employed within the year, up from about half (50.3%) the first year of reform (FFY 1997).

Progress is apparent. While still too high, child poverty rates have declined. Ten years ago 21.7% of Oklahoma's children lived in poverty. Today, only 19.1% are poor. Even so, poverty for children worsened in eighteen Oklahoma counties (Beaver, Kay, Delaware, Grant, Ellis, Kingfisher, Texas, Harper, Tillman, Garfield, Washington, Greer, Dewey, Cimarron, Woods, Roger Mills, Oklahoma and Latimer).

Just over one-third (58,193 or 35.0%) of the children living in poverty reside in one of the state's two large metropolitan counties (Oklahoma or Tulsa County) which together are populated with the same proportion (35.1%) of Oklahoma's children.

Percent of Children Living in Poverty (2000)

Marriage & Divorce

Oklahoma Marriage Initiative, 1997-2001

Births to Unmarried Mothers

Oklahoma, By Age, 2000

More good news the rate at which teenagers have babies is going down. While still too high, Oklahoma's number and rate of births to young teens (ages 15 through 17) has steadily decreased since the mid-1980's. For the most recent three years on record (1998-2000) there were only 33.0 births per every 1,000 girls ages 15 through 17.

Births to Young Teens (Age 15-17)

Three-Year Average Annual Number & Rate Oklahoma, 1984-1986 & 1998-2000

On the other hand, both the number and rate of married couples raising children decreased during the past decade. Oklahoma divorce rates are high, and remain steady, with seventy-six divorce petitions granted for every 100 marriage licenses issued. Every year the number and rate of Oklahoma infants born to single mothers increases. By 2000, one-third (34.3%) of all Oklahoma births were to women who were not married. More than half (55.9%) of the births to unmarried mothers were to women in their twenties. Today, as a result, fewer Oklahoma children (down 9,403) are raised by married couples and more (up 28,505) live in single parent households than did ten years ago. Even though most of the increase in children living in single parent households occurred during the first half of the 1990's, well over one-quarter (28.3%) of Oklahoma's children now live with one parent.

To attribute any of these changes, either positive or negative, to welfare policy ignores the undeniable

impact of the unprecedented economic growth which paralleled implementation of the 1996 welfare reform law. It is difficult, if not impossible, to separate the effects of welfare reform policies from those of the economy. Neither Oklahoma's successes nor Oklahoma's failures can be directly credited to welfare reform at this time. However, the stage is set. The questions are becoming clearer. The results are beginning

to come in. Attentive measurement of child outcomes remains essential to effective program design and management.

Looking at the Children Behind the Numbers

The numbers reflect both success and failure of the broad goals of welfare reform in Oklahoma. Welfare caseloads, unemployment among welfare families, child poverty and teen births are decreasing. Single parent households and births to unmarried mothers are increasing. What do we really know about the day-to-day impact of welfare reform on children?

Child well-being is tied to family well-being. Many mothers have moved successfully from welfare to work, improving the lives of many children in the process. Many families will likely never again need welfare benefits. Research clearly suggests that elementary school-aged children improve their school

achievement and have fewer behavior problems when family income increases. Unfortunately, poor school achievement by adolescent children whose mothers move from welfare to work has also been documented. It is not now clear whether this poor outcome results from decreased supervision, increased responsibilities being placed upon teens with working parents, or some other cause.

When evaluating the impact on children, whether or not a parent becomes employed is not the only issue to be considered. Research tells us that programs which increase employment without increasing a family's economic status do little for children. In Oklahoma, the total household income for a family leaving welfare for work is significantly lower than the total household income for those continuing to receive welfare.

Even in a strong economy, some families (and their children) struggle. Some are not able to find work or overcome their barriers to employment. For many, the jobs found are unstable, pay low-wages, offer no

health insurance, and provide no time off to care for the needs of their children. Whether a parent leaves welfare or remains on welfare (combining it with paid employment), their reality is complex, obscuring the struggle of families still trying to move successfully from welfare to work.

After leaving welfare, an Oklahoma head of a household earns a monthly average of \$1,350 (or \$7.79 per hour) for full time work (FFY 2000). A *Self-Sufficiency Standard for Oklahoma*, recently calculated for seventy different family types in each of Oklahoma's seventy-seven counties, reveals the amount of income necessary for Oklahoma families to adequately meet their basic needs without assistance or subsidy. Depending on the precise family size and where the family leaving TANF lives, an adequate income ranges from \$10.08 to \$22.98 per hour. Simply put, the real wages parents earn after leaving TANF fall well below what is needed to meet their families' basic needs anywhere in Oklahoma.

The well-being of children is the most important concern for Oklahoma's welfare policy. Reform of the welfare system can either hurt or help children.

Self-Sufficiency Standard

Low	\$10.08	\$15.30
Average	\$12.10	\$18.06

* One adult, one preschooler, one school age child

** One adult, one infant, one preschooler, one school age child

Food insecurity, defined primarily as limited or uncertain availability of nutritionally adequate and safe food, and hunger, defined as recurrent and involuntary lack of access to food, are problems among Oklahoma families on or recently leaving TANF. Regardless of employment status nearly half (48.4% of those on TANF; 47.9% of those having left TANF) of Oklahoma TANF households experience food insecurity, a rate substantially higher than found in other states. About one in five (19.6% of those on TANF; 22.2% of those having left TANF) experience food insecurity with hunger.

Food Stamps are one strategy to prevent food insecurity and hunger. A decline in Food Stamp usage among eligible families has accompanied welfare reform. Nationally, only twenty-seven percent of workers receive Food Stamps after leaving welfare. Oklahomans receiving Food Stamps each month is down more than one-fourth (26.4%) from before the 1996 welfare reform. Once out of the welfare system, it is difficult to assess the eligibility of working poor families and ensure that families leaving TANF continue to receive the food stamps for which they are eligible. Emergency food assistance requests to private agencies have increased sharply, and assistance centers have been unable to keep up with the demand. Officials identified the leading cause of hunger to be low-paying jobs.

Despite the fact that a majority of children in families leaving welfare and their parents remain eligible for Medicaid, severing the link between cash assistance and Medicaid increased the number of families

leaving welfare who are left completely uninsured — over forty percent (40.8%) in Oklahoma. Only one-fifth (22.4%) of Oklahomans who left welfare are covered by health insurance at work, while only one-fourth (26.3%) are on Medicaid. After Oklahomans leave TANF, about half of the employed parents are unable to pay their medical bills (57.9%). During the most recent year on record (FFY 2000) someone in more than forty percent (42.7%) of the families leaving TANF went without a prescription medication because they could not afford to pay for it. Someone in one-fourth (24.1%) of the families got sick or hurt during the year and could not pay for care.

Oklahoma families leaving TANF with their children face continuing hardships. About half of the employed parents are unable to pay rent (47.8%). Because of not having enough money, one-fourth of Oklahoma families leaving TANF had to share their home (25.6%) during the year. One-fourth (25.6%) of the families reported spending time in a homeless shelter. Two-thirds got behind on their utility bills (69.6%). It is common (48.1%) to go without a telephone as a way to save money. Oklahomans leaving TANF (11.7%) are twice as likely as those families staying on TANF (5.8%) to have their vehicle repossessed for non-payment.

Nationally, between one-quarter and one-third of the families leaving welfare for work had to return to TANF within one year. Cycling on and off of welfare occurred both before and after the 1996 welfare reform, suggesting that nothing has successfully addressed the need to help many recipients achieve

We began this report by asking, “Does work pay?” In one sense, the answer is yes. Many clients have left TANF because they have found jobs. These former clients have typically increased the proportion of household income from earnings. In that limited sense, there is a “payoff” associated with employment. On the other hand, total household income is lower for leavers than for stayers. In this sense, “work” does not “pay.”

Our results show that falling caseloads are probably not the result of altered incentives. Leavers, who typically incur expenses associated with employment, are watching their resources shrink after leaving TANF. This is troubling because the logic of the “work first” movement assumes that leaving welfare improves a family’s situation. If the improvement does not materialize, the logic of reform falls apart. As people shift from admittedly bad welfare situations to more challenging employment situations, we are likely to find an erosion of faith in the labor market among these economically marginal parents. Although it is beyond the scope of ODHS authority, adequate wages and benefits, particularly health insurance, would enhance the attractiveness of employment. Ultimately, labor market realities will determine the success or failure of welfare reform.

from *Leaving Welfare Behind:
The Oklahoma TANF Leavers Report*
Planning and Research Unit
Oklahoma Department of Human Services
October 2000

and maintain self-sufficiency. In Oklahoma, job retention is particularly troubling. Both part-time and full-time workers from families that left TANF also lost or quit their jobs at a significantly higher rate than other low-income workers. The families returning to welfare suffer poorer mental or physical health (46%), are less educated (38%) or face more responsibilities for an infant (19%) or child with a disability (7%) than the families who were able to stay off welfare because of their work. Post-reform welfare-to-work restrictions of sixty-months of benefits over a recipient's lifetime loom over these troubled families.

Some parents are off welfare, but still not working. A few (2%) have moved from TANF to a disability benefits program. Other parents (16%) are temporarily between jobs or have a working spouse. Most receive no benefits and are not working. In Oklahoma, around sixty percent of those who leave TANF are employed (62.1% in FFY 1999; 59.4% in FFY 2000). Those who are not employed, and their children, are suffering serious economic hardships.

Each year, large numbers of Oklahoma recipients leave welfare because of not complying with the rules. In the early days of state implementation of TANF (SFY 1998), about thirty percent (30.1%) of the closed TANF cases were closed because the parent failed or refused to cooperate in some manner. During the latest year (SFY2001) for which data is available, just over forty percent (40.4%) of the closed cases were closed for noncompliance. Evidence from other states reveals that reasons vary widely. Some did not comply because they no longer wanted or needed TANF.

Others did not understand the requirements or take them seriously. Half suffer poor physical or mental health, making work difficult or impossible. One in five (19%) have a child with a substantial disability accompanied by special medical and child care needs that can make work difficult or impossible.

Official sanctions for failure to satisfy the myriad of requirements associated with TANF can result in losing all benefits — including those for the children. When a family and their children get “off welfare” in this manner they often become lost, unlikely to get other help which may be needed. In an effort to balance the desire for strong effective sanctions against the harm caused to families and children who lose benefits, some states have turned to outreach programs. Such efforts work to clarify program requirements, providing the support necessary to help people return to compliance and reinstate benefits for their families.

Reauthorization and/or Implementation Issues

As this KIDS COUNT Factbook goes to press, federal Congress is grappling with the myriad of issues and decisions required to reauthorize the most recent federal welfare reform law, the *Personal Responsibility and Work Opportunity Reconciliation Act of 1996*. Soon after, each state (Oklahoma included) will restrict or enhance its local welfare-to-work program to accommodate the resulting mix of federal mandates and take advantage of whatever flexibility the federal law allows the states to exert. Poor Oklahoma children stand to reap the benefits

... the real wages parents earn after leaving TANF fall well below what is needed to meet their families' basic needs anywhere in Oklahoma.

or suffer the consequences of this complex process. **Collection of child support, supporting relative raising children receiving TANF, ensuring access to quality child care, protecting adolescents, restructuring work requirements and promoting marriage** are among the difficult issues that are being debated at the federal and state level.

Child Support

The 1996 welfare reform law strengthened state child support collection activities, creating data bases to help find people with child support obligations, streamlining paternity establishment, standardizing interstate child support forms and establishing tough penalties for non-payment. Good child support enforcement is an effective way to increase income for low income families. Poor families who get child support typically receive about \$2,000 more family income each year, reducing child poverty by about five percent. Oklahoma child support collections have increased more than fifty percent (54.6%) since the 1996 welfare reform act was implemented. Average collections increased twenty-seven percent (from \$692.45 in FY1996 to \$879.21 in SFY2001) as DHS handled a twenty percent (20.1%) increase in the number of cases processed each month.

The increased child support collections do not appear to greatly benefit Oklahoma TANF families. For those children on TANF for whom child support should have been received, over half (52.6%) had no support or no paternity established during FFY

2000. For those with court-ordered support, only a few received regular payments which averaged only \$167.38 per child per month.

Child support usually translates into increased parental involvement. For the child support payor, basic commitments and engagement with the child are facilitated. For the custodial parent the additional income often allows him or her to work more regular hours, enabling more time to supervise and spend with the child.

Nationally, child support laws create a complex distribution system which dictates how much of the child support collected by a state gets sent to the family and how much is kept by the government. Evaluation of a comprehensive experimental child support distribution methodology in Wisconsin suggests that distributing money directly to families can improve outcomes for the children without cost to the state since less welfare funding is used in the process. Reauthorization of the 1996 welfare reform act will raise this issue and determine how much flexibility Oklahoma will have in how to distribute the collected funds.

Relatives Raising Children Who Receive TANF

In SFY2001, just under nine-thousand (8,837) Oklahoma children received TANF “child-only” grants, providing financial support only to the child and not to the adults caring for the child. Representing over one-third (34.8%) of Oklahoma

Child Support Payments

TANF Children Eligible for Child Support
Oklahoma DHS TANF Survey, FFY 2000

TANF cases, this type of kinship care often enables a child to avoid foster care by being cared for by a relative or adult friend. The sixty (60) month time limit on receiving benefits and the work requirements do not apply to a TANF “child only” grant.

Under current TANF policy any time any adult caregiver is included in the grant, federal time limits and work requirements also apply. Low-income older relatives (such as grandparents) willing to take in a young child may be financially unable to do so. The relatively small “child only” grant provides inadequate resources to care for a child. For grandparents the job search, training and employment requirements would be an obstacle to providing a stable home. Oklahoma has large numbers of grandparents (62,219) who have accepted the responsibility of caring for one or more of their grandchildren. About one-fourth (24.7%) of these Oklahoma grandparent-headed families live in poverty. Reauthorization and state-implementation provides an opportunity to better address the special needs of such families.

Child Care

Welfare-to-work programs have increased the number of mothers with young children in the paid labor force. Today three out of five mothers with children under six work while most of their preschool children spend time in some type of child care. Child care, especially for very young children, is difficult to find and is often of low quality and high cost. Proposals on the table to

increase the work requirements to forty hours each week will drastically increase the need for child care in Oklahoma. Unfortunately, the work acceleration proposals at the federal level are accompanied by efforts to freeze funds for child care at the prior year level.

Under the 1996 welfare reform law, each state can decide whether to impose work requirements on parents of infants. A majority of states categorically exempt parents with children under the age of one year from work requirements. Oklahoma is one of eighteen states which does not. In Oklahoma every TANF mother of an infant over the age of three-months must leave home for work, further increasing the demand for infant child care.

Research results are mixed as to whether young children are positively or negatively affected when their mothers move from welfare to work. Some studies suggest the children benefit only when family income increases. Low-income children especially have been shown to benefit from full time, high quality child care. Contrary results from other studies indicate that extended stays in child care harm the parent-child interaction.

Whatever occurs during the hours children are in care outside their homes will determine the success or failure of Oklahoma welfare reform. Because mothers are required to work, Oklahoma’s youngest poor children will spend a large amount of time in child care. An increasing number of working mothers will have to depend on child care providers to help

Today three out of five mothers with children under six work while most of their preschool children spend time in some type of child care.

their children become ready for school, learn to get along with others, be creative and feel good about themselves.

Child care is, on average, the third largest expense after housing and food for all families with preschool children. Unfortunately, welfare families cannot afford the high cost of quality care at the time of their lives when their earning potential is at its lowest.

Oklahoma, and other states, added federal TANF dollars and the savings freed by plummeting caseloads to provide new supports for the working poor. With TANF dollars, Oklahoma has focused primarily on improving child care – an essential support for many of the parents trying to go to work. Using the flexibility of the current federal law, Oklahoma has advanced several major initiatives. One, a DHS subsidy program, increases the resources poor working families have to purchase child care by

paying for part or all of the care of children up to age 13 while their parents work, attend school or receive training. Eligibility and the precise amount of benefits are based on each family's income level. Another, the DHS *Reaching for the Stars* program, offers financial incentives to child care providers to improve their quality of care. Using a three-star rating system, child care providers that meet additional quality criteria and accreditation standards receive higher reimbursement rates. The DHS effort to unite the two initiatives is reflected in its plan to have all children in subsidized care receive it in Two- and/or Three-Star centers and homes. During April 2002, about one-third (33.1%) of the nearly fifty thousand (48,177) children receiving child care subsidies participated in Two- and Three-Star programs.

Reauthorization and state implementation provide an opportunity to further address the need for child care, particularly infant care, for low-income families.

Federal reauthorization could restrict or expand the type of work requirements states could impose on the parents of infants. On the other hand, expanded flexibility and funding would allow Oklahoma and other states to ensure that a working mother can find and afford high quality care for her child. States might consider replicating models from Minnesota and Montana which allow low-income families to care for infants at home by giving the parent an option to keep the subsidy and forego wages while the child is very young.

Adolescents

An analysis of welfare reform programs reveals warning signs that are unfavorable to adolescents. As mothers move from welfare to work, adolescent children are experiencing difficulties ranging from increased smoking and drinking to being

Births to Females Under Age 20

Number by Age, 1980-2000
2000 Number and Rate per 1,000
Oklahoma

arrested more often. Some had trouble in school — performing poorly, repeating grades and behaving badly. These trends require more study to determine the causes, but it is common for youth from low-income families to work to help support their families. They often assume more responsibility in the family; frequently taking on the care of their younger brothers or sisters. Adult supervision may become less common and less effective as additional work requirements leave parents with little time and energy to devote to their adolescent children. Determining the possible causes of these negative impacts on adolescents is critical to the implementation of effective policies and programs. Approximately one-third (29.9%) of the Oklahoma children on TANF are between the ages of twelve and eighteen.

Very young mothers and their babies face bleak futures. A mother under age twenty is more likely than a woman who delays childbearing to drop out of school, be less skilled, have unsteady employment and be poor. She will probably end up on TANF at some point in her life. It is common for a very young mother to be a victim of physical violence and have an unstable marriage. Her child is susceptible to repeating the mother's cycle of early childbearing, poverty and abuse. Although teen pregnancy has slowed considerably, Oklahoma has one of the highest rates of young teen (age 15 through 17) childbearing in the nation.

If a minor parent and her child need TANF cash assistance, additional eligibility rules are imposed.

The minor must stay in school and live at home (or in another approved adult-supervised setting). These TANF regulation are designed to move minor parents toward economic self-sufficiency and avoid a rapid repeat birth which would be likely to compound the problems the mother and the infant already face. In Oklahoma, almost eighteen percent (17.9%) of mothers under age twenty who gave birth in 2000 already had two or more previous births. This most recent rate is the highest since 1995, a full year before welfare reform was implemented.

Reauthorization and state implementation provide the opportunity to discuss whether specific TANF policies positively or negatively influence adolescent well-being. Ongoing evaluation of all teen outcomes, including teen pregnancy, could be required. Any reauthorization or implementation strategy investing in teen pregnancy prevention would decrease births to unmarried mothers, avoid subsequent teen births

An analysis of welfare reform programs reveals warning signs that are unfavorable to adolescents.

by the same mother, slow the growth of single parent families and avoid the myriad of social problems attendant to having a child too young.

Work Requirements

The federal law, or state policy, may restructure TANF's work requirements, increasing or decreasing the time required and the flexibility allowed. Federal law in place before the 2002 reauthorization of the welfare reform act requires a recipient of assistance to engage in work after receiving two years of benefits. Adhering to a staunch "work first" philosophy, Oklahoma has elected to shorten that time. A recipient must go to work immediately as a requirement for receiving benefits.

In order to satisfy his or her work obligation, a current Oklahoma benefit recipient must be involved in one or more work-related activities for at least thirty hours each week. A state can choose which activities it will accept as qualified activities for its TANF recipients. Allowing most of those listed in federal law, Oklahoma counts subsidized or unsubsidized employment, work experience, on-the-job-training, high school or high school equivalency education, job skills training, up to twelve months of vocational training and up to six weeks of time spent during a job search or job readiness activities. Research demonstrates that

job advancement and self-sufficiency dramatically increase for workers with postsecondary education. Although federal regulations allow states to count postsecondary education as a work-related activity, Oklahoma does not accept time spent in postsecondary education toward a TANF recipient's thirty-hour obligation.

If there is a good cause to do so, a state can exempt up to twenty percent of its caseload from the requirement to work. Acceptable causes include mothers needing to stay home to care for a very young child, no child care being available, a person being temporarily ill or incapacitated, a person caring for a disabled household member, or a recipient being disabled, of advanced age, pregnant or a victim of domestic violence. Unlike most states, Oklahoma makes very limited exceptions, regularly excusing only mothers caring for an infant under three months of age. In compliance with federal law, Oklahoma temporarily excuses single parents unable to locate child care for a young child. By federally-mandating minimum work participation rates, the 1996 welfare reform law, in effect, discourages states from creating numerous exceptions.

Ideas for restructuring TANF work requirements being debated by the federal Congress, include the Bush Administration's proposed 40-hour obligation,

combining work and work-related activities outside the home, and increasing the number of TANF recipients in each state required to satisfy that obligation. Critics fear that additional work requirements will escalate the responsibilities already placed upon adolescent children by working parents, while further decreasing the amount of supervision they receive. Such unintended consequences would negatively impact the school performance and behavior of adolescents and hinder the Bush Administration's articulated goal for TANF to improve child well-being.

Promoting Marriage

Promoting marriage is at the heart of three of the four stated purposes of the TANF program: ending the dependence of needy parents on government benefits by promoting job preparation, work and marriage; preventing and reducing the incidence of out-of-wedlock pregnancies ... ; and encouraging the formation and maintenance of two-parent families. Federal reauthorization and subsequent state implementation of TANF promises a lively debate on this issue. Federal policymakers argue that states as a whole have done little within TANF to promote marriage. Oklahoma has been the exception.

Oklahoma became the first state to earmark a significant portion of its federal welfare funds in an effort to reduce divorce and promote marriage. Led by Governor Frank Keating, ten million dollars (\$10,000,000) of TANF funds finance the

Oklahoma Marriage Initiative. The stated goal of the Oklahoma Marriage Initiative is to reduce the state's divorce rate by one-third by the year 2010. The initiative creates a broad-based public-private partnership that calls upon influential leaders from business, religion, media, government, education, legal and service providers to create plans for action within each respective sector. Plans include a wide variety of activities: statewide conferences, a Marriage Covenant (religious leaders agree to require a four- to six-month preparation period before presiding over a wedding), improved data collection, training in premarital counseling, marriage education services, high school and college curriculum on relationship development, incorporating family-friendly and faith-based principles into the workplace, creating a website, supporting a Marriage Scholars-in-Residence at Oklahoma State University, and more.

Oklahomans appear ready for the government to assist in improving marital relations. Preliminary findings from an Oklahoma State University study of marriage and divorce indicate surprisingly strong support for government initiatives such as the Marriage Initiative to promote marriage, ensure children are raised by two parents and reduce high divorce rates.

Oklahoma's high divorce rate claims the inauspicious distinction of being the second worst in the nation. Births to unmarried mothers in Oklahoma continue to rise, currently making up one-third (33.1%) of all births.

Children benefit economically by growing up with two parents. Families with two potential earners have lower poverty rates than those with one earner. Research demonstrates that married couples are better off economically than cohabiting couples, suggesting that for financial reasons marriage is preferred over two unmarried people living together. There is much

evidence to substantiate that growing up with both biological parents, regardless of income, promotes child well-being. It is the absence of the biological father that increases a child's risk for negative outcomes: dropping out of school, using drugs or alcohol, engaging in criminal behavior, and more. Children in single-parent families and children in stepparent families score about the same on child well-being measures, suggesting that marriage *per se* is not the answer.

The Oklahoma Marriage Initiative is not without its critics. While there is general agreement about the importance of marriage, skeptics feel that marriage is too personal for government intervention. Some object to diverting funds from the serious health, nutrition, housing, training and financial needs of economically vulnerable Oklahomans needing to rely on TANF for assistance. Others charge that the initiative has paid large amounts of money for little

substance. Some experts in the field believe government initiatives will do little to change behavior, indicating that public opinion must change first.

Little is currently known about what type of policies or programs could increase marriage rates and marital stability. Advocates for government involvement in marriage promotion point to its potential benefits for children. Activities funded with TANF dollars, if evaluated properly, may provide some of the first information about what works and what does not. As the first major investment of its kind, the Oklahoma Marriage Initiative will be closely watched around the nation by those wanting to determine whether such efforts can decrease divorce.

Reauthorization and state implementation provide the opportunity to discuss whether specific TANF policies positively or negatively influence marriage and strengthen or weaken families. Welfare policies that promote and provide privilege to particular kinds of families may threaten to unreasonably penalize and stigmatize others. Activities seeking to capture the benefits of having two parents for children must be careful to not encourage unstable or high-conflict unions. Any reauthorization or implementation strategy treating married and single parents the same, investing in teen pregnancy prevention, providing supports for all families, improving child support enforcement or providing assistance to low-income fathers would stabilize families and increase the likelihood of marriage.

What We Know

So, what do we know about how Oklahoma's children are faring now? Has welfare reform enabled more Oklahoma children to live in supportive, two-parent families that earn enough to meet their needs?

- We know the first step, getting people off Oklahoma's welfare rolls, has been taken and has worked. The future for the state's children is promising. Child poverty is down. More of their parents are working. Fewer of their parents are children themselves.
- We know that for many parents leaving TANF, "work pays" and their young children thrive, becoming increasingly healthy and educated.
- We know that for too many others "work does not pay." Many families struggle, barely able to support their children, facing hunger and ignoring health care needs they cannot afford. Their children fall behind in school. Their teenagers get into trouble.
- We know too many children still live with only one parent and more will. High divorce rates continue. Births to unmarried mothers escalate.
- We know that the progress made by TANF parents and their children occurred while the economy was strong. The economy of Oklahoma and the nation has since faltered. The recognized successes may grind to a halt if the economy continues to weaken.
- We know that the next challenge is to help families stay off welfare and achieve long-term self-sufficiency.
- We know success requires child care, health coverage, education, training and jobs which pay livable wages.
- We know federal and state policy for TANF is being debated and changed.
- **We know poor Oklahoma children will reap the benefits or suffer the consequences.**

Low Birthweight Infants

Each year almost thirty-six hundred Oklahoma babies (3,589 annual average) are born too small (weighing less than 5 1/2 pounds). Very, very tiny infants (weighing less than 3 pounds, 5 ounces) continue to be born in steadily increasing numbers (629 annual average).

During the most recent three-year period (1998 - 2000) the proportion of Oklahoma babies born too small slowly and steadily continued to worsen (increasing from 7.2% to 7.3% of all births) when compared to the three year period just two years earlier (1996 - 1998). Comparable rates also recently worsened in 41 of Oklahoma's 77 counties.

This trend has continued for years. A higher proportion of Oklahoma babies (7.3% of all births) are born too small today as compared to the population born in the mid-1980's (6.4% of all births), with such rates also

worsening in the majority (52 of 77) of Oklahoma's counties during the same period. Currently, the highest and worst low birthweight rate (9.9% of all county births) is found in Woods County; the lowest and best (2.7% of all county births) is in Harmon County.

The low birthweight rate for African American infants (12.5% of all African American births) more than doubles the rate for White infants (6.1% of all White births). By race, the best low birthweight rate is recorded for American Indian infants (6.2% of all American Indian births). Hispanic mothers, who may be of any race, have an even lower rate of babies born too small (6.1% of all Hispanic births).

While early prenatal care is known to improve these rates, over one-third (35.3%) of Oklahoma's babies were born to mothers who failed to receive the recommended

level of prenatal care during the most recent three-year period reported.

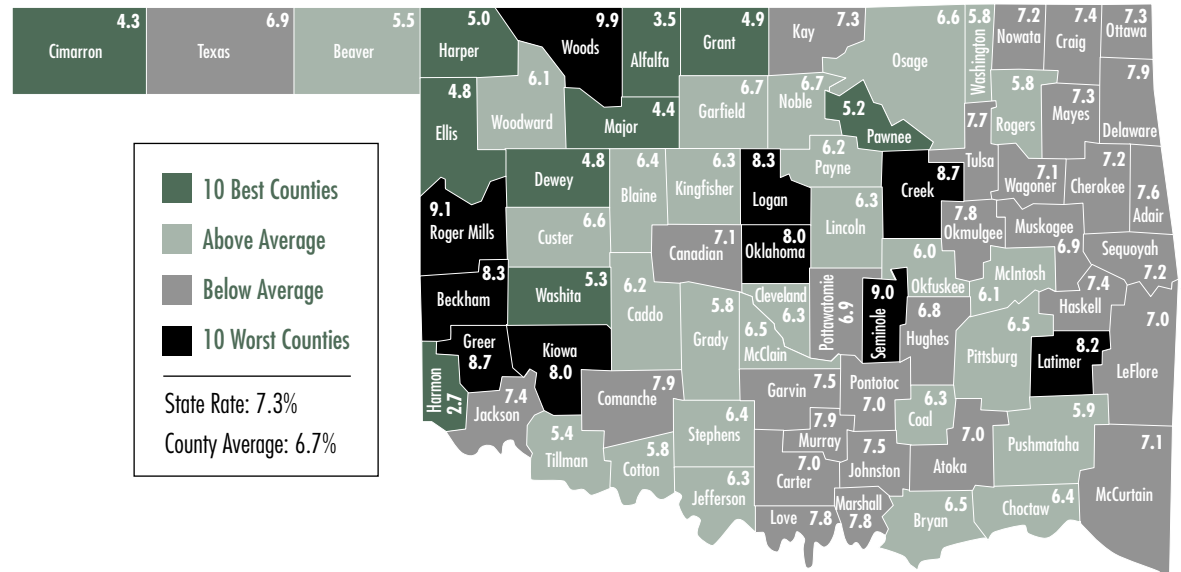

Ranking near the middle of all the states, Oklahoma's rate of low birthweight infants is average relative to other parts of the country. Oklahoma's rank among the fifty states improved from 21st to 20th during the most recent year (1998) measured.

Over forty-three percent (1,578 per year or 43.6%) of the infants weighing less than five and one-half pounds at birth were born to mothers who live in one of the state's two large metropolitan counties (Oklahoma or Tulsa County) which together account for just under forty-one percent (40.8%) of Oklahoma's births.

Babies Weighing Under 5 1/2 Pounds Oklahoma, 1998-2000, By Race and Ethnicity

Three-Year Percent of Infants Born Weighing Less than 5 1/2 Pounds (1998 - 2000)

Child Abuse & Neglect

For the most recent three-year period (Fiscal Years 1998-2000) an annual average of more than sixty thousand (60,253) situations were investigated by the Oklahoma Department of Human Services (DHS) as possible abuse and/or neglect of one or more children.

During this period DHS confirmed a near record-high number of those allegations. On average, nearly sixteen thousand (15,733) of the incidents investigated each year were found to be actual abuse and/or neglect.

During the most recent three-year period (Fiscal Years 1998 - 2000), the rate of confirmed child abuse and/or neglect in Oklahoma continued to rise when compared to the three-year period just one year earlier (Fiscal Years 1997 - 1999). Oklahoma abuse and neglect rates moved from 17.7 to 17.8 confirmations per 1,000 children in the community, with comparable rates also worsening in the majority (43 of 77) of Oklahoma's counties.

Child abuse and neglect is maintaining its record high rates. Today, Oklahoma's rate of confirmed child abuse and/or neglect (17.8 confirmations per 1,000 children) is virtually double what it was in the mid-1980's (9.0 confirmations per 1,000 children). Such rates also worsened in almost every (70 of 77) Oklahoma county during the same period. Currently, the highest and worst proportion of children confirmed to be victims of child abuse and/or neglect (38.6 per 1,000) is found in Pushmataha County; the lowest and best (2.7 per 1,000) is in Beaver County.

A record high of forty-eight Oklahoma children died from child abuse and/or neglect during FY 2000. Among the dead were thirty girls and eighteen boys of all races. Twenty-four were less than one year of age; twelve were toddlers (ages one through three). The dead also included school age children ranging from kindergartners to children old enough to be in high

school. The oldest known to have died at the hands of their caretakers this year were two fifteen year old boys. Both were victims of neglect.

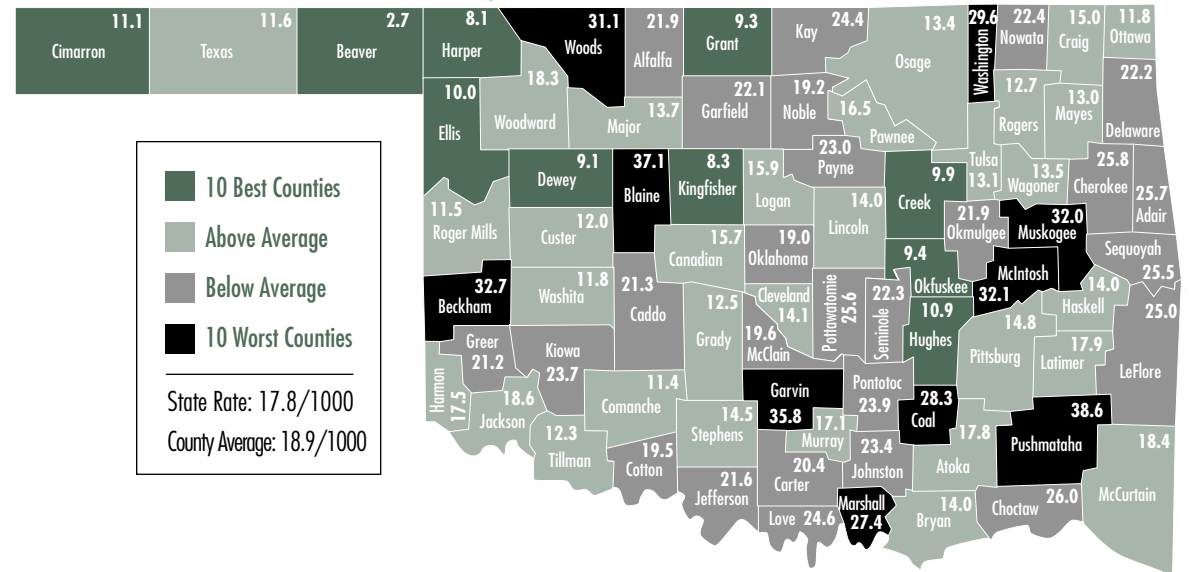

More than two-thirds (68.7%) of confirmations of abuse and/or neglect in Oklahoma involve children who are White. However, while non-White children comprise only about one-fifth (21.8%) of the child population, they account for a greater proportion (28.8%, excluding those whose race is not known) of the confirmed child abuse and/or neglect incidents.

One-third (5,046 per year or 32.1%) of the confirmed incidents of child abuse and/or neglect occurred in one of the state's two large metropolitan counties (Oklahoma or Tulsa County) which together are populated with just over one-third (35.1%) of Oklahoma's children.

Child Abuse & Neglect Confirmations By Race of Child Oklahoma, FY 1999-2000

Three-Year Rate of Confirmations After Investigation Per 1,000 Children (FY1998 - 2000)

Child & Teen Death

About eight Oklahoma children and youth from the ages of 1 through 19 die each and every week. During the most recent three-year period an average of four hundred seven died each year. Just under half (46.9% or 191) of these annual child deaths are children from the ages of 1 through 14; the remainder are teenagers (ages 15 through 19).

The average annual rate of death among Oklahoma children from the ages of 1 through 14 improved (from 31.3 to 28.2 per 100,000) during the most recent three-year period (1998 - 2000) when compared to the three-year period two years earlier (1996 - 1998). In a small majority of Oklahoma counties (41 of 77) child death rates improved during these years.

A lower rate (28.2 per 100,000) of children from the ages of 1 through 14 die currently than did in the mid-1980's (41.5 per 100,000), with such rates also improving or staying the same in the large majority (52

of 77) of Oklahoma's counties during the same period. Currently, the highest and worst rate of child death (109.3 per 100,000 children age 1 through 14 in the county) is found in Dewey County; the lowest and best (0.0 per 100,000) is found in nine Oklahoma counties (Ellis, Hughes, Woods, Murray, Major, Roger Mills, Greer, Johnston, Cimarron).

Over half (55.1%) of all child and teen deaths during the most recent three year period were accidental. Oklahoma children and teens are less likely to die of diseases (26.9%) or violence (18.0%).

One third (32.4%) of the African American children and teens who do not live to adulthood die violently. A young African American is twice as likely to die of violence in Oklahoma than his or her White peer (16.4%). Accidental death rates hover around sixty percent for both White (57.8%) and American Indian (61.5%) children and teens.

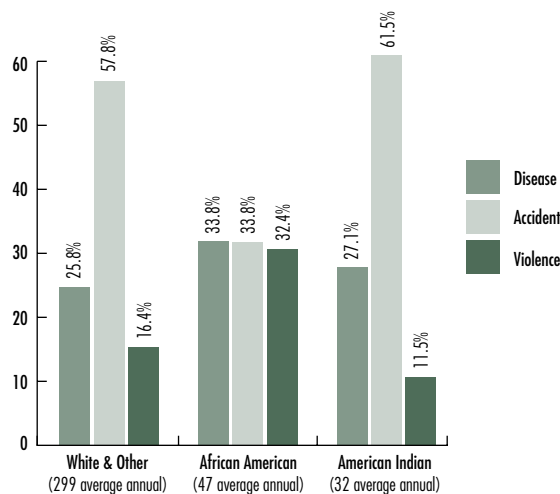

Oklahoma's young people kill themselves at a rate almost twice the national average. The number of young people committing suicide continues to increase with an average of thirty-five Oklahoman victims under age 20 each year (1998 - 2000). While most are older White male adolescents, recent Oklahoma suicides have victimized all races, both sexes and children as young as eleven.

Even with the improvement in death rates since the 1980's, Oklahoma's ranking relative to other states for the most recent year compared (1998) remains among the worst (44th in child death) in the nation.

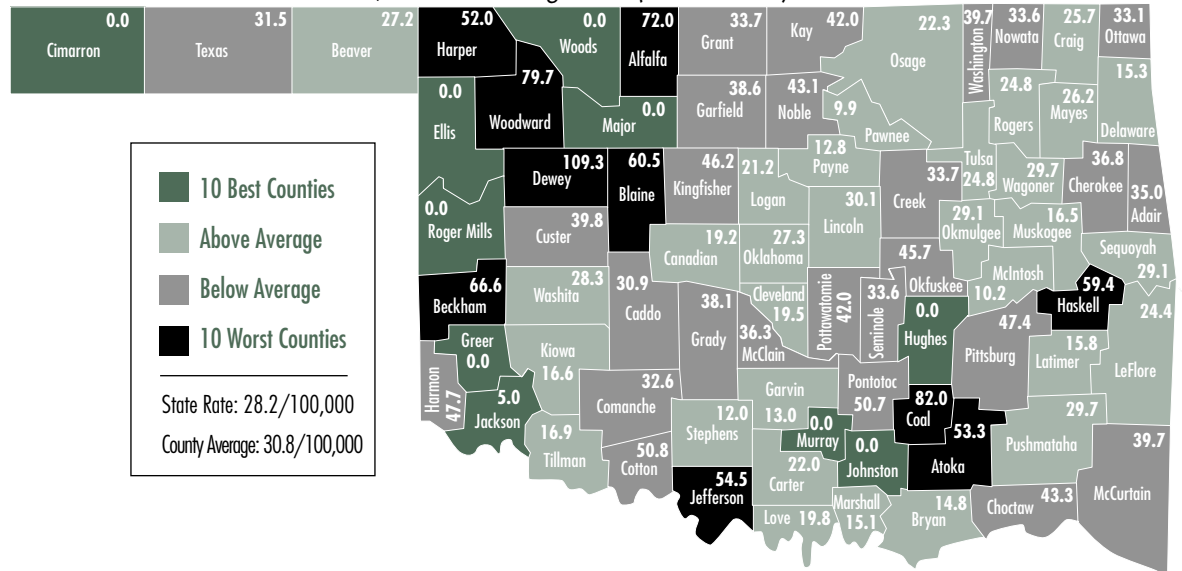

One-third (63 per year or 32.8%) of the children age 1 through 14 who died lived in one of the state's two large metropolitan counties (Oklahoma or Tulsa County) which together are populated with about thirty-five percent (35.4%) of Oklahoma children age 1 through 14.

Deaths Among Children & Teens

Three-Year Percent, by Cause, By Race Oklahoma 1998-2000

Three-Year Rate of Deaths Per 100,000 Children Age 1-14 (1998 - 2000)

High School Dropouts

During the most recent three-year period (School Years 1997/1998 - 1999/2000) an annual average of more than eleven thousand (11,014) young Oklahomans quit school without graduating. Over nine thousand (9,406) of those dropping out were ages 18 or younger.

More than one of every five students in Oklahoma who starts high school as a freshman does not earn a high school diploma. Compared to any other grade, the largest numbers continue to leave school during the ninth grade.

There was not much change in Oklahoma high school dropout rates during the most recent three-year period when compared to the three-year period just one year earlier. The standstill high school dropout rate of 5.5% resulted in roughly the same average number of Oklahoma children (under age 19) leaving high school (grades 9 through 12) without graduating each year. During the same period there was little variance in

county high school dropout rates. Rates improved in 35 counties and worsened in 42.

Oklahoma's high school dropout rate (5.4%) during the most recent three-year period is slightly better, but still remains close, to that of the comparison three-year period (5.5% for School Years 1994/1995 - 1996/1997). Such rates also improved in a small majority (43 of 77) of Oklahoma's counties during the same period. Currently, the highest and worst rate of children leaving school without graduating (8.4%) is found in Texas County; the lowest and best (0.2%) is in Dewey County.

During School Year 1999/2000 the proportion of high school dropouts who were girls (45.5%) and the proportion who were boys (54.5%) changed little from the prior year.

During the most recent three-year period (School Years 1997/1998 - 1999/2000) the large majority (6,776 per year or 61.5%) of children failing to finish high school are White. However, while non-White children comprise only about one-fifth (21.8%) of the child population, they account for a much higher proportion (38.5%) of the high school dropouts.

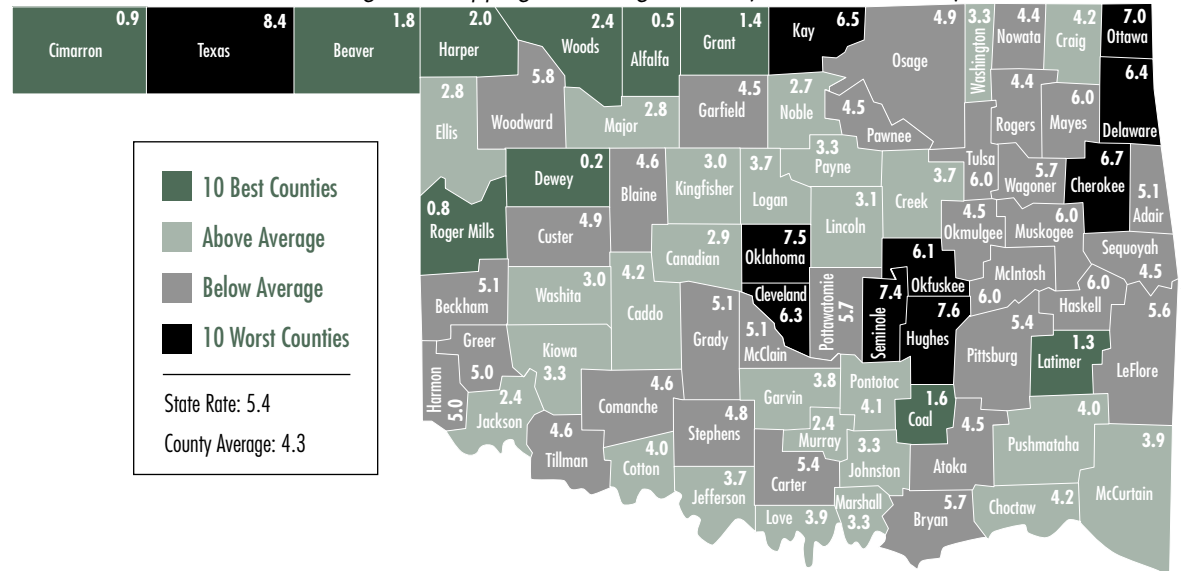

During the most recent year for which comparison data is available (1997), Oklahoma remained at about the middle of all states (23rd) in the percent of teens who are high school dropouts (9.0% of those ages 16 through 19).

Almost forty percent (3,747 per year or 39.6%) of the youth under age 19 who quit high school without graduating live in one of the state's two large metropolitan counties (Oklahoma or Tulsa County) which together are populated with just under one-third (31.7%) of Oklahoma's high school attendees.

Students Quitting School Without Graduating All Ages, By Race Oklahoma, School Years 1997/1999 through 1999/2000

Three-Year Rate of Youth Under Age 19 Dropping Out of High School (SY 97/98 - 99/00)

Juvenile Violent Crime Arrests

In 2000, juveniles accounted for just under 15.6% of all persons arrested for all Oklahoma crimes.

During the most recent three-year period (1998 - 2000) more than a thousand (1,035) Oklahoma youths from the ages of 10 through 17 were arrested each year for committing violent crimes. Each year, an average of twenty-five were arrested for murder, three for manslaughter, 63 for forcible rape, 224 for robbery and 719 for aggravated assault.

During these three years the overwhelming majority of youth arrested for violent crimes in Oklahoma were male (83.2%).

During the most recent three-year period (1998 - 2000), the proportion of Oklahoma youths from the ages of 10 through 17 arrested for violent crimes continued to decrease when compared to the three-year period just one year earlier (1997 - 1999). Oklahoma violent

crime arrest rates for this age group moved from 271.4 to 251.4 per 100,000 youth, with comparable rates staying the same or improving in most (46 of 77) of Oklahoma's counties.

The current proportion of Oklahoma youths from the ages of 10 through 17 arrested for violent crimes continues to improve from the record highs recorded during the 1990's. The rate of arrest for these youth (251.4 arrests per 100,000 youth) during the most recent three-year period (1998 - 2000) is substantially improved over that of the comparison three-year period (334.1 arrests per 100,000 youth for 1990 - 1992). Comparable rates also improved or remained the same during the same period in half (38 of 77) of Oklahoma's counties.

Currently, the highest and worst rate of youths from the ages of 10 through 17 (522.3 arrests per 100,000 youth) arrested for violent crimes is found in Tulsa County. The lowest and best rates (0.0 arrests per 100,000 youth) are in eight Oklahoma counties (Ellis, Roger Mills,

Beaver, Grant, Cimarron, Harper, Love, Alfalfa). While non-White children comprise only about one-fifth (21.8%) of the child population, they accounted for twice as many (43.1%) of the violent crime arrests of children under age 18 during the most recent three-year period.

Based on the latest figures available, Oklahoma's 1998 rate (278 per 100,000 youths ages 10 through 17) of arresting young people for violent crimes continued to remain well below the corresponding national violent crime arrest rate (394 per 100,000 youths ages 10 through 17).

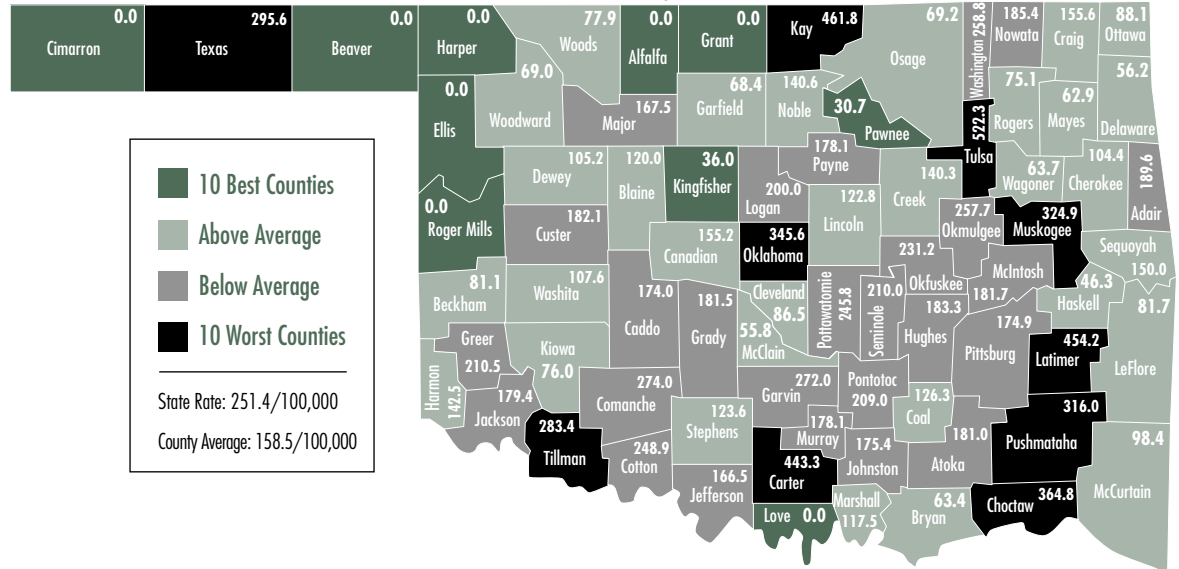

Well over half (585 youth or 56.5%) of the violent crime arrests of youths from the age of 10 through 17 were in one of the state's two large metropolitan counties (Oklahoma or Tulsa County) which together are populated with one-third (33.2%) of all youths age 10 through 17.

Juvenile Violent Crime Arrests Under Age 18, By Race Oklahoma, 1998-2000

Hispanic youth may be of any race and with an annual average of 65 violent crime arrests comprise 6.2% of all 1998-2000 Oklahoma juvenile violent crime arrests.

Understanding Data

County Benchmark Key *A Comprehensive Guide to Understanding Benchmark Data*

The *map* of Oklahoma has the location of the county highlighted.

The *county name* and *county seat* are along the top of each benchmark chart.

The *numbers, percentages and poverty rate of children* in the county are here.

The county is *ranked* on each indicator to allow you to compare rates for this county with other counties. 1 is the best ranking; 77 is the worst ranking.

Five new indicators profile the welfare of children in this country after welfare reform. See *Methodology and Sources* for a detailed explanation of each indicator.

The Welfare of Children
 Children on TANF (FY2001): **253** (4.0% of all children)
 Children on TANF per 100 poor children (FY2001): **15**
313 fewer children in this county received TANF each month during FY2001 than received AFDC before 1996 welfare reform
51.0% of children on DHS child care subsidies received child care in 2- or 3-Star facilities (April 2002)
 Income from a minimum wage job (\$5.15 per hour) provides **48.5%** of **\$10.62**, the hourly wage a single parent with one preschool and one school age child would need to earn in a full-time job in order to be self-sufficient in **Adair County**

The *seven indicators* tracked by KIDS COUNT profile the status of children and youth in Oklahoma. See *Methodology and Sources* for a detailed explanation of each indicator. For example, High School Dropouts only count youth under age 19.

Base data for each indicator presents a rate for a previous three-year period when data comparable to that measured currently was available. Each item specifies the base rate and period in which it was collected.

The *bar chart* shows the percent change between the base data and the recent data for each indicator. If the bar goes to the left of center, the county rate has worsened. If the bar goes to the right of center, the county rate has improved. The lighter colored wider bar behind the bar chart is the state rate for that indicator and allows you to compare the county with the state as a whole.

Recent data for each indicator presents a rate for the most recent three years. Each item specifies the recent rate and period in which it was collected.

Interpreting the Data

Understand What is Being Measured

It is important to understand what is being measured and how. Several types of data information are available for each benchmark: numbers, average annual numbers, county and state rates, percentage change between years, base and recent data, and county rankings. A “key” directing the reader to the various types of data information is presented at the beginning of this *Understanding the Data* section. The *Methodology and Sources* later in this section details what each benchmark means, what data is included and its source.

Each county benchmark and the rate of change calculated for each county benchmark is rounded for presentation on the county pages. The rounding may cause the results to vary from the rates which might be calculated from the rounded numbers appearing on each county page.

Beware of Small Numbers

County populations vary significantly. Such variations should be considered when interpreting the differences among counties. Be aware that small counties may have a small number of events (e.g., child deaths, arrests for violent crimes) which can cause rates to vary considerably from year to year without reflecting real change. For this reason, the benchmarks use three-year averages to improve the reliability of rate comparisons.

Low rates may appear in counties with large populations. Relying solely on rates, without considering the numbers involved, may result in overlooking locations which have large numbers of suffering children.

Remember the Uses and Limits of Data

Benchmarks provide important baseline information. Effective use of benchmarks requires them to be understood in a broad context. They provide one way to look at how children are doing in a county or state. Benchmarks can provide the starting place to initiate dialogue with others who share your interest. There are many important perspectives required to piece together a complete picture. Collect additional data and viewpoints to flesh out the most useful view of child well-being in your own area.

Methodology and Sources

Data and information used in the 2002 Oklahoma KIDS COUNT Factbook came from a wide variety of sources in Oklahoma and around the nation. This section identifies the sources for the information found in this document and the method used for computations where applicable.

There is no agreement about the specific terminology or the number of categories which should be used to classify race and ethnicity. The categories listed in this report are the categories in the sources relied upon for information. At times, different sources will use different categories to report racial characteristics. Some indicators were not available by race at all. This makes it difficult to look across the indicators by race. Persons within each race or ethnic group are encouraged to re-title or refer to the data in a manner which reflects their preferences.

Extreme caution should be used when reviewing, using and comparing data related to Hispanic populations. Some agencies count Hispanic children as a race and others consider Hispanic to be a nationality whose children can be any race (White, African American, Native American, and so on). Of those counting Hispanic children as a nationality, only a few maintain statistics on the proportion of children who are Hispanic.

As a result, when Hispanic is considered to be a race, data may appear as follows:

White	70.0%
Native American	10.0%
American Indian	10.0%
Hispanic	5.0%
Asian	2.0%
Other	3.0%
TOTAL	100.0%

When Hispanic is considered to be a nationality, data may appear as follows:

White	72.0%		
Native American	11.0%		
American Indian	11.0%		
Asian	2.0%	Hispanic	5.0%
Other	4.0%	non-Hispanic	95.0%
TOTAL	100.0%	TOTAL	100.0%

Child Population is the total resident population under age 18 including dependents of Armed Forces personnel stationed in the area. Child population data for 1980, 1990 and 2000 for the state and counties are counts from the 1980, 1990 and 2000 Census.

SOURCE: Data provided by Oklahoma State Data Center, Planning and Research Division, Oklahoma Department of Commerce (ODOC), using U.S. Bureau of the Census, Census of the Population and Housing 1980, Summary Tape File 1A and 2B; U.S. Bureau of the Census, Census of the Population and Housing

1990, Summary Tape File 1A and Summary Tape File 2B; and U.S. Bureau of the Census, Census of the Population and Housing 2000, Summary Tape File 1.

Children in Poverty counts the related children under age 18 who live in families with incomes below the U.S. poverty threshold. Related children are the children related to the “family head” by birth, marriage or adoption and include relatives such as nieces and nephews. Children under age 18 who do not live in a household where they are related to the head of the household are not included in this analysis. Data counts poor related children calculated as a percent of all related children. Trends compare percent of child poverty in 1990 to the percent of child poverty in 2000. Updated annually using the Consumer Price Index, the poverty thresholds, as defined by the U.S. Bureau of the Census, are based upon the amount of money that is required to purchase a nutritionally adequate diet. A family is classified as poor if its income falls below this minimum standard.

For example, in 2001, a single adult (under age 65) with one child would be counted as poor if their income fell below \$1,013/month; with two children below \$1,189/month; with three children below \$1,502/month; and so on.

SOURCE: Data provided by Information Management, Oklahoma Department of Commerce (ODOC), using U.S. Bureau of the Census, Census of the Population and Housing 1980, Summary Tape File 3A, U.S. Bureau of the Census, Census of the Population and Housing 1990, Summary Tape File 3A and U.S. Bureau of the Census, Census of the Population and Housing 2000, Summary Tape File 3.

Welfare Reform is used as the term for the federal policy changes put in place after the passage of the *Personal Responsibility and Work Opportunity Reconciliation Act of 1996*. The following terms and acronyms are commonly used in discussions of welfare reform.

AFDC: Aid to Families with Dependent Children, the cash grant available to eligible families and children prior to welfare reform in 1996

Asset level: The amount of countable assets a family can have and remain eligible for TANF benefits

Benefit level: The amount of the cash grant available to an eligible TANF family

CCDF: Child Care Development Fund, federal funding to states to provide assistance to low-income families in achieving and maintaining self-sufficiency and toward improving the overall quality of child care

Child outcome: An aspect of a child’s development or well being (i.e., health, school performance, behavior)

Child support enforcement: Policies requiring a TANF recipient to assign rights to child support to the state and cooperate with paternity establishment.

DHHS: U.S. Department of Health and Human Services

DHS: Oklahoma Department of Human Services

Diversion: Assistance offered to a family as an alternative to ongoing TANF assistance, typically includes short term cash assistance and/or referral to job placement or alternative service programs

Family cap: A policy which does not allow the increase of benefits to a family when a child is born more than nine months after the family began receiving benefits

FFY: Federal fiscal year, running from October 1 to September 30

Food insecurity: Limited or uncertain availability of nutritionally adequate and safe foods or limited or uncertain ability to acquire acceptable foods in socially acceptable ways

Food security: Access by all people at all times to enough food for an active, healthy life

Hunger: The recurrent and involuntary lack of access to food

Income disregards: The amount of money welfare recipients can earn before their benefits are reduced

Poverty guidelines: A federal measure of poverty issued each year by DHHS for administrative purposes, including determining financial eligibility for income-based programs; DHHS poverty guidelines are a simplification of the Census Bureau's poverty threshold

Poverty threshold: A federal measure of poverty issued by the U.S. Bureau of Census for statistical purposes, including counting the number of people living in poverty

PRWORA: Personal Responsibility and Work Opportunity Reconciliation Act of 1996

Sanctions: Options a state has to reduce or terminate the assistance payable to a family not engaging in the required work or work activities

Self-Sufficiency Standard:
A measure of the amount of income needed for a family of a given composition in a given place to adequately meet its basic needs without public or private assistance

SFY: State fiscal year, running from July 1 to June 30

TANF: Temporary Assistance to Needy Families, the cash grant available to eligible families after welfare reform in 1996

Time limits: The total amount of time a family is eligible to receive welfare benefits

Welfare dependence: More income from public assistance (i.e., food stamps, housing assistance) than earnings

Welfare leavers: Prior recipients not now receiving a cash grant

Welfare stayers: Current recipients of a cash grant

Welfare-to-Work: The term generally used to describe welfare reform programs, requiring a recipient of a cash grant to participate in activities designed to obtain employment and move off welfare

Work exemptions: Options under PRWORA allowing states to permit a family to not comply with its work requirements and still receive a cash grant for a period of time; such families are not counted in the calculations a state must make to prove they are in compliance with federal participation rates

Work requirement waivers: Permission for which states can apply in order to adopt state work requirements which are not consistent with federal law and policy

The text boxes labeled *The Welfare of Children* display several data items related to the impact of welfare reform on Oklahoma children. Taken together the data items provide one view of welfare reform for Oklahoma and each county. The data items should be used in conjunction with other state and county indicators available in the 2002 Oklahoma KIDS COUNT Factbook and from other sources. Data in the text boxes include the following:

Children on TANF (FY2001) — counting the unduplicated number of children (under age 18) receiving cash grants between July 1, 2000, and June 30, 2001; displaying the number of children on TANF as a percent of all children in the state or county.

SOURCE: TANF data provided by Oklahoma Department of Human Services (DHS), from Annual Report Fiscal Year 2001, Table 35 Commerce (ODOC); Population data provided by Information Management, Oklahoma Department of Commerce (ODOC), using U.S. Bureau of the Census, Census of the Population and Housing 2000, Summary Tape File 1.

Children on TANF per 100 poor children (FY2001) — displaying the number of children (under age 18) receiving cash grants between July 1, 2000, and June 30, 2001, for every 100 children living on incomes which fall below 100% of the federal poverty threshold.

SOURCE: TANF data provided by Oklahoma Department of Human Services (DHS), from Annual Report Fiscal Year 2001, Table 35; Poverty data provided by Information Management, Oklahoma Department of Commerce (ODOC), using U.S. Bureau of the Census, Census of the Population and Housing 2000, Summary Tape File 3.

Number of children receiving TANF compared to number of children receiving AFDC (FY2001 and pre-1996 welfare reform) — comparing the number of children receiving TANF cash grants each month during

FY2001 to the number of children receiving AFDC cash grants each month during FY1996, to determine how many fewer children currently receive cash grants each month than did before welfare reform.

SOURCE: Data provided by Oklahoma Department of Human Services (DHS), from Annual Report Fiscal Year 2001, Table 35, and FY 1996 Annual Report, Table 11.

Percent of children on DHS child care subsidies receiving child care in 2- or 3-Star facilities (April 2002) — measuring the proportion of low-income children from working families receiving subsidies to help pay for child care who receive that care in a facility (includes both centers and homes) which is Two- or Three-Star rated, indicating the facility provides a higher quality of care (through activities such as receiving additional staff or administrator training, reading to children daily, involving parents, creating weekly lesson plans, becoming nationally accredited)

SOURCE: Data provided by Division of Child Care and Planning and Research Unit, Office of Finance, Oklahoma Department of Human Services (DHS): Oklahoma City, Oklahoma.

Minimum wage as a percent of a self-sufficiency wage — comparing the income received from a minimum wage job (\$5.15 per hour) and the hourly wage a single parent with one preschool child and one school age child would need to earn in a full-time job in order to be self-

sufficient. The Oklahoma text box compares the minimum wage with the average wage necessary for that three-person family to be self-sufficient in a metropolitan county and in a non-metropolitan county. Each county text box compares the minimum wage with the average wage necessary for that three-person family to be self-sufficient in that county. A self-sufficiency wage is the amount of income needed for a family of a given composition in a given place to adequately meet its basic needs without public or private assistance. Self-sufficiency standards are calculated for seventy different family types in each of Oklahoma's seventy-seven counties. A single parent family of three (one preschool child and one school age child) was chosen for display in the text boxes placed in the overview and county benchmark section of this Factbook. The three-person family most closely approximates the type of family typically receiving a cash grant. A single parent family of four (one infant, one preschool child and one school age child) was added to the text box in the section focusing on welfare reform in this Factbook. The four-person family most closely approximates a family recently leaving welfare.

SOURCE: Data provided by Community Action Project of Tulsa County from the Self-Sufficiency Standard for Oklahoma published in February 2002, by Wider Opportunities for Women and the Community Action Project of Tulsa County.

Low Birthweight Infants are live births weighing under 5.5 pounds (2,500 grams). **Very Low Birthweight Infants** are live births weighing under 3 pounds, five ounces (1,500

grams). The data is reported by place of mother's residence, not place of birth. Births count both the total resident live births and the low-weight births and compare two three-year periods (1984 through 1986 and 1998 through 2000), resulting in three-year rates. Race is reported as White, Black and American Indian. Other races are included in numbers and calculations for White. The "race of child" reflects the mother's race. State totals may vary from the total of all the counties since state totals may include births for which the county of residence was unknown. Beginning in 1998, information on the ethnicity of the mother allows display of low birthweight rates for the Hispanic population. **Level of Prenatal Care** addresses the timing and amount of medical care and monitoring an expectant mother receives. Levels of care include: adequate (the recommended level of care beginning in the first trimester with ten or more visits), intermediate (care beginning in the first trimester with four through nine visits OR care beginning in the second trimester with four or more visits), early (care beginning in the first trimester), late (care beginning in the third trimester with one or more visits), little (care beginning in the first or second trimester with one through three visits), and no care. Rates are calculated as percentages of all live births. Births count both the total resident live births and the level of care for the three-year period from 1998 through 2000, resulting in a three-year rate.

SOURCE: Data provided by Family Health Service, Oklahoma State Department of Health (OSDH): Oklahoma City, Oklahoma.

Infant Mortality is death occurring to an infant under 1 year of age. The data is reported by place of mother's residence, not place of birth or death. Rates are

calculated per 1,000 live births. The data counts the total resident live births and the deaths for two three-year periods (1984 through 1986 and 1998 through 2000), resulting in three-year rates. Race is reported as White, Black and American Indian. The “race of child” reflects the mother’s race. State totals may vary from the total of all the counties since state totals may include births for which the county of residence was unknown.

SOURCE: Birth and mortality data provided by Family Health Service, Oklahoma State Department of Health (OSDH); Oklahoma City, Oklahoma.

Births to Young Teens are live births which occur to teens ages 15 through 17. The data is reported by place of mother’s residence, not place of birth. Births count the total resident live births to teens in this age group for two three-year periods (1984 through 1986 and 1998 through 2000), resulting in three-year rates. Rates are displayed as births per 1,000 females between ages 15 through 17. Base female teen population data for the state and counties is the midpoint between the 1980 and 1990 Census population of females between ages 15 through 17. Current child population data for the state and counties is estimated by the U.S. Bureau of the Census for 1998 and 1999, as adjusted by the State Data Center to arrive at a current estimate of the number of females between ages 15 through 17, and the 2000 Census population of females between ages 15 through 17. Race is reported as White, Black and American Indian. Other and unknown races are reported separately. State totals may vary from the total of all the counties since state totals may include births for which the county of residence was unknown.

SOURCE: Birth data provided by Family Health Service, Oklahoma State Department of Health (OSDH); Oklahoma City, Oklahoma; Population data provided by Information Management, Oklahoma Department of Commerce (ODOC), using U.S. Bureau of the Census, Census of the Population and Housing 1980, Summary Tape File 1A; U.S. Bureau of the Census, Census of the Population and Housing 1990, Summary Tape File 1A; U.S. Bureau of the Census, Population Estimates Branch, 1998; U.S. Bureau of the Census, Population Estimates Branch, 1999; and U.S. Bureau of the Census, Census of the Population and Housing 2000, Summary Tape File 1.

Child Abuse and Neglect means harm or threatened harm to a child’s health or welfare by a person responsible for the child’s health or welfare. Abuse includes sexual abuse, sexual exploitation or non-accidental physical or mental injury. Sexual Abuse includes rape, incest and lewd or indecent acts or proposals by a person responsible for the child’s welfare. Sexual Exploitation includes a person responsible for the child’s welfare allowing or encouraging a child to engage in prostitution or pornography or engaging in child pornography. Neglect means failing to provide adequate food, clothing, shelter or medical care. 10 O. Supp. 2000 § 7102. Data includes reports of suspected abuse or neglect for which there were formal investigations and, of those, the number for which abuse or neglect was confirmed. The data compares child abuse and neglect confirmation for two three-year periods (Fiscal Years 1984 through 1986 and Fiscal Years 1998 through 2000), resulting in three-year rates. Rates are displayed as confirmations per 1,000 children (under age 18). Base child population data for the state and counties is the midpoint between the 1980 and 1990 Census populations. Current child population data for the state and counties is estimated

by the U.S. Bureau of the Census for 1998 and 1999, and the 2000 Census population. Race is reported as White, Black, Indian, Asian and Unknown. Because of changes in the race categories after FY 1998, only FY 1999 and FY 2000 are included in the race tabulations.

SOURCE: Child abuse and neglect data provided by the Division of Child Welfare, Oklahoma Department of Human Services (DHS); Oklahoma City, Oklahoma. Population data provided by Information Management, Oklahoma Department of Commerce (ODOC), using U.S. Bureau of the Census, Census of the Population and Housing 1980, Summary Tape File 1A; U.S. Bureau of the Census, Census of the Population and Housing 1990, Summary Tape File 1A; U.S. Bureau of the Census, Population Estimates Branch, 1998; U.S. Bureau of the Census, Population Estimates Branch, 1999; and U.S. Bureau of the Census, Census of the Population and Housing 2000, Summary Tape File 1.

Child Deaths are the number of deaths of children from ages 1 through 14. **Teen Deaths** are the number of deaths of youth from ages 15 through 19. The data is reported by place of residence, not place of death. The data counts deaths from all causes. The data compares the deaths for two three-year periods (1984 through 1986 and 1998 through 2000), resulting in three-year rates. Rates are displayed as deaths per 100,000 children from ages 1 through 14 and deaths per 100,000 teens from ages 15 through 19. Base child population data for the state and counties is the midpoint between the 1980 and 1990 Census populations. Current child population data for the state and counties is estimated by the U.S. Bureau of the Census for 1998 and 1999, as adjusted by the State Data Center to arrive at a current estimate of the number of children from the

ages of 1 through 14, and the 2000 Census population for children from the ages of 1 through 14. Current teen population data for the state is estimated by the U.S. Bureau of the Census for 1998 and 1999, as adjusted by the State Data Center to arrive at a current estimate of the number of teens from the ages of 15 through 19, and the 2000 Census population for the number of teens from the ages of 15 through 19. State totals may vary from the total of all the counties since state totals may include deaths for which the county of residence was unknown. **Cause of Death** measures the percent of deaths that are caused by diseases, accidents and violence. By definition, deaths by violence include murder, suicide and deaths that occur during legal interventions. Race is reported as White, Black and American Indian. Other races are included in numbers and calculations for the White race.

SOURCE: Death data provided by Family Health Service, Oklahoma State Department of Health (OSDH): Oklahoma City, Oklahoma. Population data provided by Information Management, Oklahoma Department of Commerce (ODOC), using U.S. Bureau of the Census, Census of the Population and Housing 1980, Summary Tape File 1A; U.S. Bureau of the Census, Census of the Population and Housing 1990, Summary Tape File 1A; U.S. Bureau of the Census, Population Estimates Branch, 1998; U.S. Bureau of the Census, Population Estimates Branch, 1999; and U.S. Bureau of the Census, Census of the Population and Housing 2000, Summary Tape File 1.

School Dropouts count youths of any age who quit school without graduating. **High School Dropouts** count youths under age 18 who quit high school (grades 9 through 12). The data presents the number of school dropouts and high school dropouts for two three-year periods (School Year 1994/1995 through 1996/1997 and School Year 1997/1998 through 1999/2000). **High School**

Dropout Rates compare number of high school drop-outs under age 19 to the enrollment in grades 9 through 12. The data compares the high school dropout rates for two three-year periods (School Year 1994/1995 through 1996/1997 and School Year 1997/1998 through 1999/2000). School officials in Oklahoma are required to notify the State Department of Education of the name, address, race and age of any pupil dropping out of school. 70 O.Supp. 1996 § 35e(A). Race is reported as White, Black, Indian, Asian and Hispanic. There is no provision for reporting other races. Hispanic children, for the purposes of this data, are counted as a race, rather than an ethnic group preventing precise racial comparisons between this data and other data in the Oklahoma KIDS COUNT Factbook.

SOURCE: Data provided by the Office of Accountability, Education Oversight Board: Oklahoma City, Oklahoma.

Juvenile Violent Crime Arrests count arrests of youth from the ages of 10 through 17 for violent offenses (homicide, forcible rape, robbery, or aggravated assault). The annual arrest figures include all arrests for violent offenses during the year, including repeated arrests of the same individual for different offenses. Rates compare the number of arrests of youth ages 10 through 17 for violent offenses (homicide, forcible rape, robbery, or aggravated assault) to all children ages 10 through 17 and is reported as a rate per 100,000 youths. The data compares juvenile violent crime rates for two three-year periods (1990 through 1992 and 1998 through 2000). Base child population data for the state and counties is the 1990 Census population. Current child population data for the state and counties is estimated by the U.S. Bureau of the Census for 1998 and 1999, as adjusted

by the State Data Center to arrive at an estimate of the number of children from the ages of 10 through 17, and the 2000 Census population for the number of children from the ages of 10 through 17. Increases in the number of arrests may reflect increases in juvenile crime, changes in police activity and changes in public policy. While policies and practices regarding juvenile arrests may vary from county to county and city to city, it is widely believed that the policies are more consistent for violent crimes than for less serious crimes. Data collected counts juveniles by age or by race, but age and race cannot be compared. Race is reported as White, Black, Indian, and Asian. There is no provision for reporting other races. Hispanic origin is counted separately and as an ethnicity, not as a race. Oklahoma KIDS COUNT reports juvenile violent crime arrest data on a state and county basis. Several counties reported no juvenile violent crime arrests in the years included in the Oklahoma KIDS COUNT Factbook.

SOURCE: Arrest data provided by the Oklahoma State Bureau of Investigation (OSBI): Oklahoma City, Oklahoma. Population data provided by the Oklahoma State Data Center, Planning and Research Division, Oklahoma Department of Commerce (ODOC), using U.S. Bureau of the Census, Census of the Population and Housing 1990, Summary Tape File 1A; U.S. Bureau of the Census, Population Estimates Branch, 1998; U.S. Bureau of the Census, Population Estimates Branch, 1999; and U.S. Bureau of the Census, Census of the Population and Housing 2000, Summary Tape File 1.
