About Oklahoma KIDS COUNT Leadership

Leaders Build Relationships

Members of each Oklahoma KIDS COUNT Leadership Class work locally and across the state with others who are interested in improving the lives of Oklahoma's children and youth. Leaders have the opportunity to network with policymakers, community leaders, social service providers and concerned citizens.

Leaders Help Solve Problems

One tenet of KIDS COUNT is that local people solve local problems. Each Leader receives technical assistance and leadership training to support them in their role as a resource person on children and youth issues. Individuals who are a part of KIDS COUNT guide their own communities toward creating a better life for children and youth.

Leaders Work For Children And Youth

Children and youth are our voiceless, voteless citizens. KIDS COUNT Leaders elevate public awareness of pertinent issues on behalf of children and youth. Through media releases and events, community meetings, Child Watch Visits, Round Table discussions and other publicity activities, Leaders generate public interest and provide helpful information on issues important to children and youth.

Leaders Make A Difference

They are Leaders who care about children and youth. They lead others to the cause. The work that they do lifts them up as role models to all members of the community. Through Oklahoma KIDS COUNT, they have the resources, connections and support to improve the lives of children and youth.

Individuals from all racial, ethnic, religious, socioeconomic, professional and political backgrounds, from high school age to senior citizens are encouraged to apply.

KIDS COUNT Leaders must be available to attend the KIDS COUNT Advocacy Camp which is held the first Friday and Saturday in August.

The year-round application process for Oklahoma KIDS COUNT Leadership is easy! Applications must be postmarked on or before the third Monday in June. Please contact Ann Patterson Salazar at 405/236-5437 extension 106, or apsalazar@oica.org if you have any questions, or go to www.oica.org to download an application.

Oklahoma KIDS COUNT Leaders are trained in the areas of legislative and grass roots advocacy, communicating children's issues and community organizing. KIDS COUNT Leaders are available for group presentations and individual meetings.

KIDS COUNT Leaders are chosen annually through an application process. (A description of the Oklahoma KIDS COUNT Leadership program and the application process can be found on page 6 in this book.)

About OICA

{VISION}

OKLAHOMA'S CHILDREN AND YOUTH WILL BECOME
HEALTHY AND CAPABLE ADULTS THROUGH THE SUPPORT OF
CARING FAMILIES AND COMMUNITIES.

The Oklahoma Institute for Child Advocacy (OICA) is a broad-based, multi-issue organization that promotes programs and policies designed to improve the health and well-being of Oklahoma's children and youth. OICA is a membership organization that has purposely remained flexible and grassroots oriented to better respond to the wide array of needs identified across our state. Its work provides a critical link between the provision of programs and services at the local level and the policy-making process at the state level.

is beautiful, My
Grandma gave it
to me. If it is
raining when my
Grandma comes
over we dance
in the rain. She
gave me this
rain coat so
I can dance
in the rain
without getting
my clothes wet.

OKLAHOMA

loves its children.

The 2003 CENSUS EDITION of the Oklahoma KIDS COUNT Factbook uses the latest decennial census data (Census 2000) to provide the most comprehensive state and county demographic information available about Oklahoma's children, including population, gender, race and Hispanic/Latino origin. Additional indicators displayed from Census 2000 were chosen to capture the wide range of conditions that shape the lives of children ... as individuals, in their families and in their neighborhoods.

The federal Census 2000 provides this once in a decade opportunity to assess and display the rich and complex picture of Oklahoma's children ... establishing a new baseline for the twenty-first century, and beyond. For this one year and this one edition, the Oklahoma KIDS COUNT Factbook breaks with its established tradition of tracking benchmarks measuring the well-being of Oklahoma children over time and across counties to provide a reference useful to Oklahoma policy makers and advocates for the next several years.

Oklahomans care about all children, not just their own. They embrace the hope for a solid beginning, a successful childhood and an optimistic future for each **individual child**.

They understand that no child can be overlooked if Oklahoma is to achieve its great future. The ever-changing **families** of children nurture this future, providing the anchor and motivation required for children to be strong and resilient, keeping Oklahoma's promise. As Oklahoma families suffer or prosper, individual children will suffer or prosper. Oklahomans understand that the **neighborhoods** in which children live frame their life experiences, create their individual realities, and make Oklahoma's future possible.

Children As Individuals

If Oklahoma had only **100** children, eleven would be American Indian, ten would be African American, one would be Asian. Most of the rest would be White. Regardless of their race, eight would be Hispanic or Latino. If Oklahoma had only 100 children, twenty would live in families so poor they could not provide that child with an adequate diet. Six of those poor children would be under the age of five. If Oklahoma had only 100 children, at least six would live with a significant disability. Four of those children would be mentally disabled, probably mentally retarded. If Oklahoma had only 100 children, we would have to take care of each one. We would have none to spare. Oklahoma has only **892,360** children. We have to take care of each one. We have none to spare.

Children remain the strength, promise and future of Oklahoma. While Oklahoma's child population decreased between 1980 (854,884) and 1990 (837,007), by 2000 it had increased substantially to almost nine hundred thousand (892,360) children. One in four (25.9%) Oklahomans is under the age of eighteen (18). Boys slightly outnumber girls (51.3%, to 48.7%).

Racial categories were altered significantly between the current census and the prior ones, making comparisons over time difficult. In

a major change from Census 1990, Census 2000 asked respondents to report one or more races. In Oklahoma almost sixty-five thousand children (63,737, or 7.1%) were categorized as being of two or more races. The remaining children were identified as having only one racial identity: White, African American, American Indian, Asian, Hawaiian or other Pacific Islander, or other. Composing about two-thirds (67.6%, or 603,525) of Oklahoma's children, the largest single race in Oklahoma remains White.

Children By Race

Under Age 18, Oklahoma: 2000

Poverty Among Children

Related Children Under Age 18 Living Below Poverty Level, Oklahoma & Counties: 2000

The largest single non-White race of Oklahoma children is American Indian (11.0%, or 98,144). The fastest growing segment of Oklahoma's young population, Hispanic or Latino children which may be of any race, now number over seventy thousand (70,078, or 7.9%).

The Oklahoma KIDS COUNT Factbook begins its measure of individual child well-being with a comprehensive account of children living in poverty. Poverty among children is more than an inconvenience. Being poor means living in a family unable to purchase enough food for an adequate diet. Poor children are more likely than non-poor children to stay too cold in the winter and too hot in the summer, to score low on standardized tests, to drop out of school, to receive little health care, and to die during their childhood.

The immediately preceding edition of this Oklahoma KIDS COUNT series took an initial look at how poor Oklahoma children were faring under the 1996 federal welfare reform effort, the Personal Responsibility and Work Opportunity Reconciliation Act of 1996 (see, Oklahoma KIDS

COUNT Factbook 2002). Census 2000 enables this edition of the Oklahoma KIDS COUNT series to generate a detailed portrait of poverty for Oklahoma and all seventy-seven Oklahoma counties.

One in every five (19.6%) Oklahoma children, more than one hundred seventy thousand (171,929), lives in poverty. Oklahoma's poverty rate for children is higher than that for all children in the United States (16.6%), placing Oklahoma near the bottom (41ST) of the national rankings. Only nine states (New York, Texas, Kentucky, Alabama, Arkansas, West Virginia, New Mexico, Louisiana and Mississippi) have a larger share of children living

in poverty than Oklahoma. Among Oklahoma counties the proportion of children living in poverty ranges from the lowest and best rate found in Canadian County (10%) to the highest and worst rate almost four times higher found in Harmon County (38.2%).

Problems associated with having few resources are exacerbated for those living far below the federal poverty line. More than seventy thousand (70,851, or 8.1%) Oklahoma children live in extreme poverty, existing on family incomes which fail to reach even half of a poverty income. Rates of children living in extreme poverty in Oklahoma range from a low of 3.5% in Alfalfa County to a

Just over sixty thousand (60,075, or 34.9%) of the related children under age eighteen who live in poverty reside in one of the state's two large metropolitan counties (Oklahoma or Tulsa County) which together are populated by slightly more than one-third (315,868, or 35.5%) of all related children in Oklahoma.

high of 24.0% in Harmon County. While poverty affects all ages, over one-third (35.0%) of its Oklahoma victims are children. Even then child impoverishment is less than even-handed. Child poverty discriminates against Oklahoma's very youngest, those who are not White, and children living with only one parent.

Children who experience poverty during their preschool years have less of a chance for success than children and adolescents who experience poverty only in their later years. Oklahoma's youngest are Oklahoma's poorest (23.0%) with more than fifty thousand (53,201) infants, toddlers and preschoolers under the age of five living in

poverty. Cleveland County and Rogers County share the lowest and best poverty rate (12.9%) among their youngest children. The highest and worst rate of poverty among very young children is found in Latimer County where two of every five (41.0%) infants, toddlers and preschool children under the age of five live in poverty.

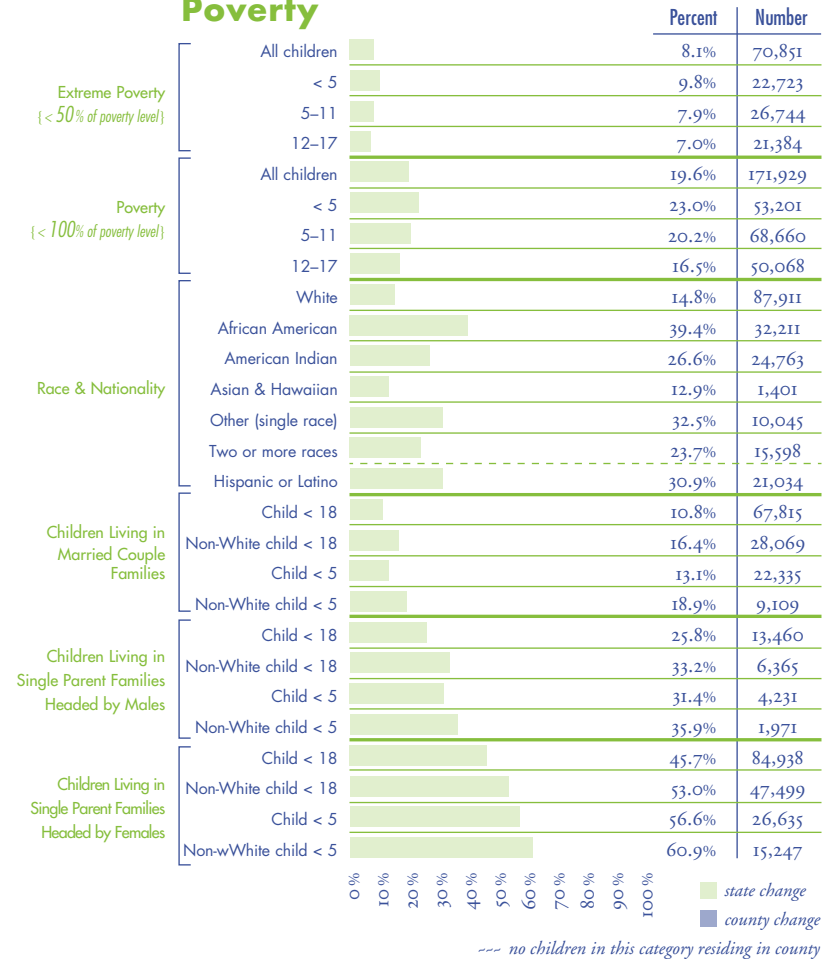

Oklahoma child poverty is racist. Most non-White children have significantly higher poverty rates than those who are White (14.8%). In Oklahoma, two of every five (39.4%) African American children and one of every four (26.6%) American Indian children live in poverty. Only Asian, Hawaiian or Pacific Islander children have a lower poverty rate (12.9%) than White children (14.8%). Almost one of every three (30.9%) Hispanic or Latino children, who may be of any race, live in poverty. Poverty rates for non-White children reach almost ninety percent (88.9%) for African American children in Mayes County. All (100.0%) American Indian children in Cimarron County and all (100.0%) Asian, Hawaiian or Pacific Islander children in Harmon, Hughes, and Tillman counties were counted as poor by Census 2000.

One in every ten (10.8%) children living in married-couple families is poor. The burden of poverty increases substantially for children living in single parent families. One in every four (25.8%) children is living in poverty if their family is headed by a single male. One in every two (45.7%) children is living in poverty if their family is headed by a single female.

Poverty rates become extreme when considering overlapping characteristics. Oklahoma poverty rates exceed sixty percent (60.9%) among very young non-White children living in single parent families headed by a female. Comparable rates across Oklahoma counties equal or exceed seventy-five percent in fourteen Oklahoma counties (Caddo, 77.9%; Choctaw, 75.0%; Cotton, 93.1%; Custer, 91.9%; Ellis, 100.0%; Johnston, 85.7%; Latimer, 86.9%; Major, 88.5%; Marshall, 91.7%; Okfuskee, 84.9%; Roger Mills, 83.3%; Stephens, 77.8%; Texas, 78.6%; and Tillman, 82.7%).

The geography and intensity of poverty shifts according to who is poor. Understanding Oklahoma child poverty requires

Poverty

that comparisons be made to impoverishment in the general population and between various subcategories of poor children. The comparisons displayed in the four maps below reveal that the worst pockets of poverty deepen and move around the state as poverty by age, race and family type are specifically displayed.

This edition of the Oklahoma KIDS COUNT Factbook concludes its measure of individual child well-being by surveying childhood experience at three strikingly different developmental stages—early childhood, school years and young adulthood.

High quality early childhood care and education experiences are vital

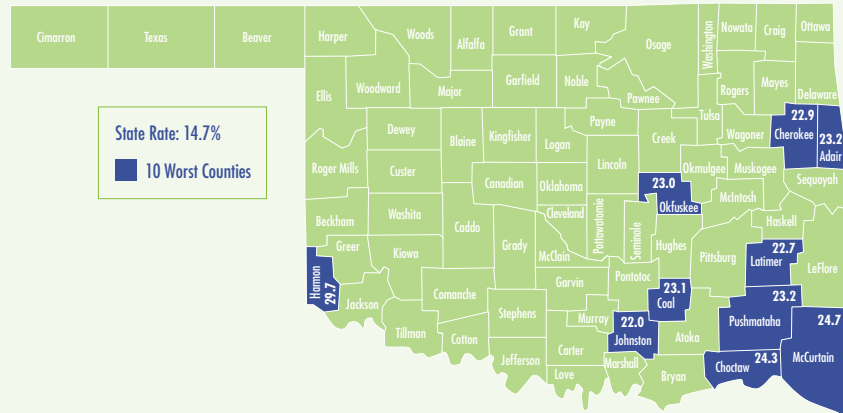

to a child’s future. An earlier edition of this Oklahoma KIDS COUNT series focused on early childhood care and education, reporting on the connections between early experiences and a young child’s brain development (see, Oklahoma KIDS COUNT Factbook 2001). Currently, about half (49.3%) of all three and four year old children in the United

States begin their education early by attending nursery school, preschool or kindergarten. Ranking twenty-eighth (28th) with 45.5% of three and four year old children attending such programs, Oklahoma falls near the middle of all states. Comparable county rates range from about one-fourth (25.6%) in Cimarron County to two-thirds (67.0%) in Woods County.

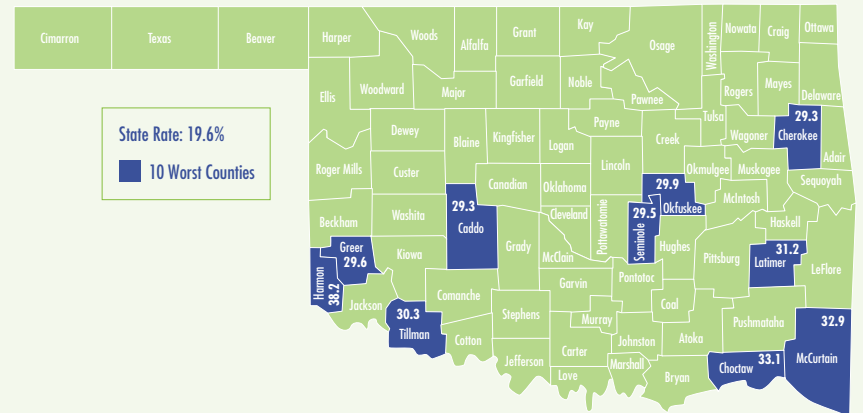

The ten worst counties for poverty among the general population (all ages) fall primarily in Little Dixie, southeast Oklahoma, where poverty is relatively entrenched in rural, remote communities with few educational or employment opportunities. In these ten worst counties, poverty among the general population ranges from twenty-two percent (22.0%) in Johnston County to just under thirty percent (29.7%) in Harmon County.

The ten worst counties for poverty among all children (under age 18) move from Little Dixie, spreading across rural southern Oklahoma counties. In these ten worst counties, poverty among children ranges from near thirty percent (29.3%) in Cherokee County and Caddo County to almost forty percent (38.2%) in Harmon County.

State Rate Poverty in General Population

State Rate Child Poverty

	Number	Percent
Number & percent of 3 and 4 year olds enrolled in nursery school, preschool or kindergarten	42,258	45.5%

The discovery that a child has a disability makes a profound impact on the child, their family, their school and their community. Such a child can experience a minor

struggle or a major upheaval. The common reality is that a child with a serious disability may not be able to attend school regularly, may regress between school years, is rarely placed in appropriate child care or may be kept isolated from children without disabilities. Great rewards result when good parenting, quality child care, specially designed instruction

Child Disability By Type

Oklahoma: 2000, Total: 35,033

[20,516]	60.7%	Mental
[974]	2.9%	Physical
[4,233]	12.5%	Sensory
[7,497]	22.2%	Multiple
[558]	1.7%	Self-Care

and reasonable accommodations help such a child acquire social skills, appropriate education and a hopeful future. In Oklahoma, more than thirty-five thousand (35,033) children from the age of five through fifteen have a disability. Currently, a small percentage (5.8%) of all five through fifteen year old children in the United States have one or more disabilities.

The ten worst counties for poverty among non-White children moves into higher population counties (Tulsa, Oklahoma, and Comanche). In these ten worst counties, poverty among non-White children ranges from near fifty-five percent (55.3%) in Tillman County to seventy-three percent (73.0%) in Adair County.

State Rate Poverty Among Non-White Children

The ten worst counties for child poverty in female-headed families scatter to all corners of Oklahoma. In these ten worst counties, poverty among children living in single parent families headed by females ranges from about sixty percent (59.3%) in Cimarron County to about seventy percent (69.6%) in Harmon County.

State Rate Poverty Children Living in Single Parent Families Headed by Females

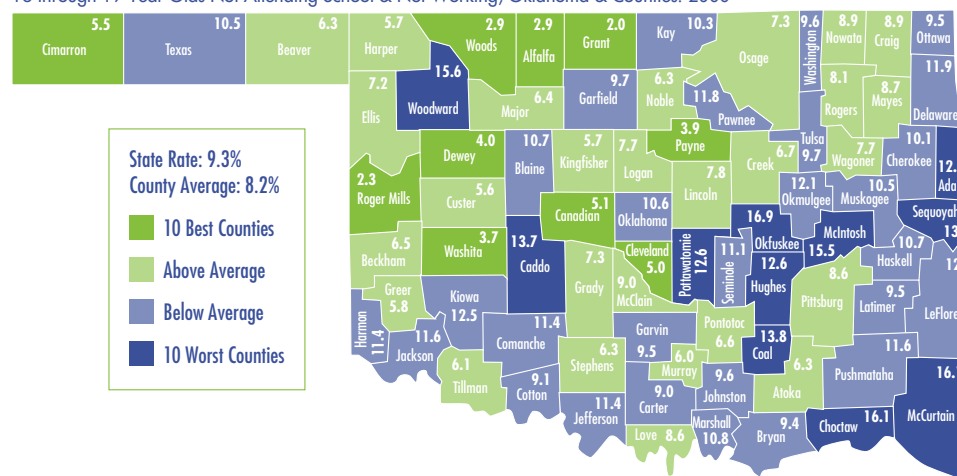

Ranking thirty-eighth (38TH) with 6.4% of five through fifteen year old children having at least one disability, Oklahoma is in the lower half of all states. Child disability rates are lowest (2.9%) in Cimarron County and highest (10.7%) in Pittsburg County. Almost a quarter (22.2%) of Oklahoma's children who have a disability have more than one. Mental disability is the most common (60.7%) childhood disability in Oklahoma.

	Number	Percent
Five to fifteen year old Oklahoma children with a disability	35,033	6.4%

Getting a good start as a young adult is vital to lifelong success. The vulnerable young people who are neither in school nor in the work force are typically marginalized teenagers undergoing a difficult transition into adulthood. Education is critical to finding and keeping a good job. Those who spend their young adult years unemployed and out of school have a hard time finding and keeping a job later in life. Almost one in ten (9.3%) Oklahoma youth from the ages of sixteen through nineteen are not engaged in either work or school, resulting in nearly twenty thousand

Idle Teens

16 through 19 Year Olds Not Attending School & Not Working, Oklahoma & Counties: 2000

Just over one-third (7,184, or 36.4%) of the youth age sixteen through nineteen who neither work nor are in school reside in one of the state's two large metropolitan counties (Oklahoma or Tulsa County) which together are populated by just under one-third (71,881, or 33.0%) of all Oklahoma youth age sixteen through nineteen.

19,758 or **9.3%** of sixteen through nineteen Oklahoma teens are not attending school or working

(19,758) idle youth. About the same proportion (8.9%) of teens are idle in the United States. Oklahoma ranks thirty-third (33RD) in the share of teens who are not engaged in either work or school. Among Oklahoma counties the proportion of idle teens ranges from the lowest and best rate of two percent (2.0%) in Grant County to the highest and worst rate of almost

seventeen percent (16.9%) in Okfuskee County. Most (51.8%) of Oklahoma's idle teens are both high school dropouts and outside of the labor force.

Idle Teens By Status

Not Attending School & Not Working
Age 16 through 19, Oklahoma: 2000, Total: 19,758

[2,731]	16.8%	High School Graduate, Not in School, Unemployed
[5,108]	31.4%	High School Graduate, Not in School, Not in Labor Force
[8,435]	51.8%	School Dropout, Not in Labor Force

Children In Their Families

Families nurture the **future**, providing Oklahoma children their primary relationships, often biological, always social, emotional and economic. Families are expected to meet their children's needs for food, shelter and intimacy. Families are where children are motivated, learn respect and develop resiliency. Children carry their family traditions and cultures into Oklahoma's future. Oklahoma families are facing new realities. A narrow definition of **family** – a breadwinning father, a caretaking mother and two or more children – no longer fits Oklahoma families. Longer life spans, effective birth control, participation of women in the work force, skyrocketing divorce rates, social problems and economic realities have converged to reshape family life in Oklahoma. Today, a majority **52.4%** of Oklahoma families have no children living in their home. Today's Oklahoma families with children come in all shapes and sizes. They might be headed by married couples, single mothers and fathers, grandparents or other relatives. As these Oklahoma families suffer or prosper, Oklahoma children will suffer or prosper.

This section of the Oklahoma KIDS COUNT Factbook examines Census 2000 income comparisons to display the well-being of children in Oklahoma families. The following review of family experience focuses on household composition, displaying numbers and rates of children living in families without two parents or being raised by their grandparents.

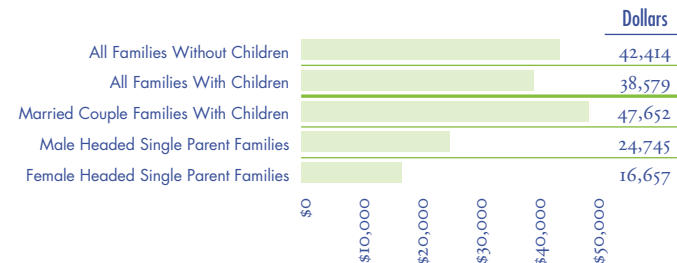

Children do best when they live in families that earn enough to meet their needs. With half of Oklahoma's families with children living above the median and half living below

Income	
Median income of Oklahoma families with children	\$38,579

it, median annual income measures the economic security of children by looking at the family wage earner's ability to earn a decent living. Oklahoma's median annual income of \$38,579 for families with children is almost ten thousand dollars below the median income for the United States (\$48,196), placing Oklahoma near the bottom (45TH) of the national rankings. Only families with children in Louisiana, Arkansas, New Mexico, Mississippi and West Virginia live on less income than such families earn in

Median Family Income

By Family type, Oklahoma: 2000

Oklahoma. Varying dramatically by county, median incomes for families with children are the lowest and worst in Harmon County (\$24,688) with an amount which is less than half that found in the highest and best in Rogers County (\$50,983). Family income is lower for Oklahoma families with children (\$38,579) than it is for

those without (\$42,414). Children living with a single parent do not fare well economically. Median family income for a male-headed single parent family with children is almost half (\$24,745) that for a married couple family with children (\$47,652). If the single parent family with children is headed by a female, the

Median Income

Families With Children, Oklahoma & Counties: 2000

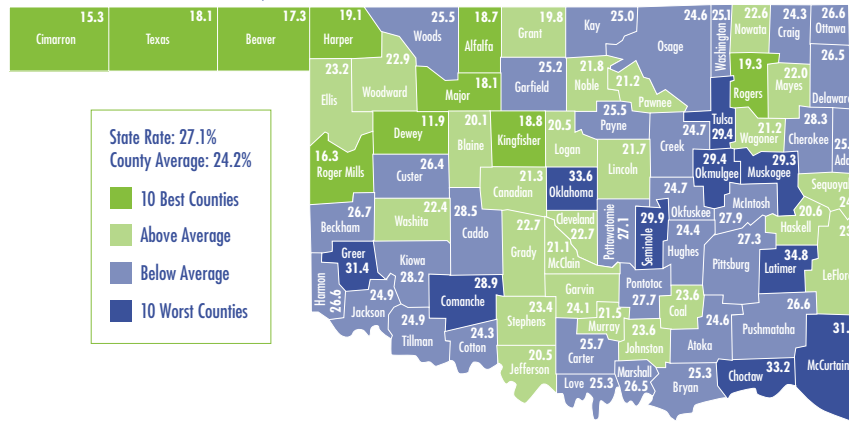

median family income plummets to only \$16,657 each year.

It is generally accepted and research confirms that children do best when they live in supportive two-parent families. Half of Oklahoma's children will spend some part of their childhood living with a single parent. Matching the rate for the United States as a whole (27.1%), more than one in four (119,914, or 27.1%) Oklahoma families with children are headed by a single parent, placing Oklahoma near the middle (30th) of all states in its share of families in which children live with only one parent. Across Oklahoma counties the proportion of families with children who live with only one parent ranges from the lowest and best rate of just under twelve percent (11.9%) in Dewey County to a rate more than three times higher in Latimer County (34.8%). While the large majority (72.9%) of Oklahoma families with children live with two parents, more than three-quarters (75.8%) of Oklahoma's single parent households with children are headed by females.

With median incomes of \$38,067 in Oklahoma County and \$44,689 in Tulsa County, incomes for families with children are better than average in the state's two large metropolitan counties which together are populated by one-third (158,302, or 35.8%) of all Oklahoma families with children.

Single Parent Families With Children

Percent of All Families With Children, Oklahoma & Counties: 2000

More than forty percent (50,012, or 41.7%) of Oklahoma's single parent families reside in one of the state's two large metropolitan counties (Tulsa or Oklahoma County) which together are populated by one-third (158,302, or 35.8%) of all Oklahoma families with children

For the first time Census 2000 formally counted the number of grandparents with primary responsibility for raising their own grandchildren. Oklahomans take care of their own. Almost sixty percent (58.5%) of

Oklahoma grandparents who live with their own grandchild assume the primary responsibility for raising that grandchild, placing Oklahoma second only to Wyoming (58.6%). An Oklahoma grandparent is raising their own grandchild in almost forty thousand (39,279) Oklahoma households. The increasing number

	Number	Percent
Oklahoma families with children headed by a single parent	119,911	27.1%

of grandparents having to raise their own grandchildren may be fueled by teen pregnancy, out-of-wedlock birth, substance abuse, death, disability, mental illness, imprisonment or poverty among the birthparents. Few are temporary arrangements. Most (52.9%) of these households find the grandparent having assumed primary responsibility for their grandchild for three years or longer. Compared to only 1.5% nationally, more than two percent (2.1%) of all Oklahomans age thirty (30) and over living in a household

is a grandparent raising their own grandchild. Comparable county rates range from under one percent (0.7%) in Ellis County to almost four percent (3.7%) in Adair County.

Children In Their Neighborhoods

Children are impacted by their **surroundings** ... the families, neighborhoods and communities in which they live. Large numbers of Oklahoma children are growing up in **neighborhoods** where high poverty is the norm, where it is common for families to be headed by only the mother, where teens regularly drop out of school and where men do not work. Ambitions, possibilities and limitations are often established for young people through their life experiences in such neighborhoods. Children look up to and follow the people they know, neighbors providing **role models** for their future. Regardless of the specific circumstances of each individual or family, all who live in a typical disadvantaged neighborhood are disadvantaged. All neighbors have limited access to services and transportation. All neighbors deal with high prices and little opportunity.

The four maps spread across the bottom on these two pages display areas in which large portions of county children live in distressed neighborhoods. Each map looks at a different troublesome factor – child poverty, female-headed households with children, high school dropouts and non-working men – to measure the proportion of county children

who live in neighborhoods where the rate for that factor is one and one-half times higher than it is for the state. Taken together, these four factors provide a comprehensive picture for each county of the neighborhoods in which children live.

The individual county's rank on each of the four factors is combined

into a *Disadvantaged Neighborhood Index* in which the higher the number, the more disadvantaged the neighborhoods in which larger proportions of their children live. Fifteen Oklahoma counties (Beaver, Cimarron, Cotton, Dewey, Ellis, Grant, Harper, Kingfisher, Lincoln, Love, Murray, Noble, Nowata, Roger Mills, and Washita) have a

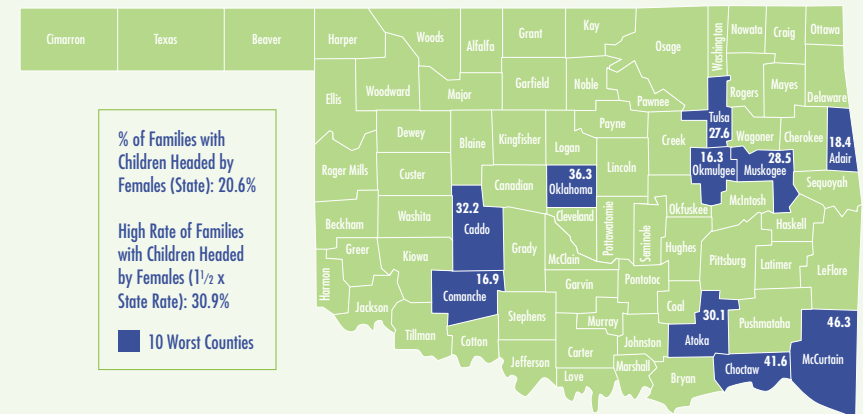

Across the state, more than one of every five children (21.1%) lives in a neighborhood in which the rate of poverty among the neighborhood children is very high (above 29.5%), one and a half times higher than the state rate (19.6%). In the ten worst areas of the state, half or more of the county's children (49.1% in Cherokee County to 100.0% in Harmon County) live in high poverty areas.

Almost one of every six Oklahoma children (17.5%) lives where the proportion of single parent families headed by females is excessive (above 30.9%), one and a half times higher than the state rate (20.6%). Ranked last among Oklahoma's seventy-seven counties, almost one of every two children (46.3%) in McCurtain County lives in a neighborhood populated by a high rate of single parent households headed by females.

Children Living in Neighborhoods With High Child Poverty Rates

Children Living in Neighborhoods With High Rates of Single Parent Families With Children Headed by Females

Disadvantaged Neighborhood Index of “0,” demonstrating that none of their children live in neighborhoods where large proportions of the children suffer high rates of poverty, where more families than usual are headed by a single mother with no husband present, where disproportionately high rates of children drop out of high school, or where a larger than usual

proportion of the men are not in the labor force at all. In the ten worst counties, generating a *Disadvantaged Neighborhood Index* of 222 to 296, a large proportion of children live in very disadvantaged neighborhoods. Among these ten counties are those where as high as eighty percent (80.5%, Choctaw County) of the children live in a high poverty neighborhood, up to half

Nearly one of every four children (22.4%) lives in an Oklahoma neighborhood where the high school drop out rate is extreme (above 15.0%), one and one-half times higher than average (10.0%). In the ten worst areas of the state, a third or more of the county’s children (32.2% in Caddo County to 77.3% in Marshall County) live where a large proportion of high school students drop out of school.

One of every fifteen Oklahoma children (6.7%) lives where the proportion of non-working males is noticeably high (above 32.9%), one and a half times higher than the state rate (21.9%). Ranked last among Oklahoma’s seventy-seven counties, three of every four children (74.9%) in Sequoyah County live in neighborhoods populated by high rates of men who are not in the work force.

Children Living in Neighborhoods With High Rates of High School Dropouts

Children Living in Neighborhoods With High Rates of Males Not in the Labor Force

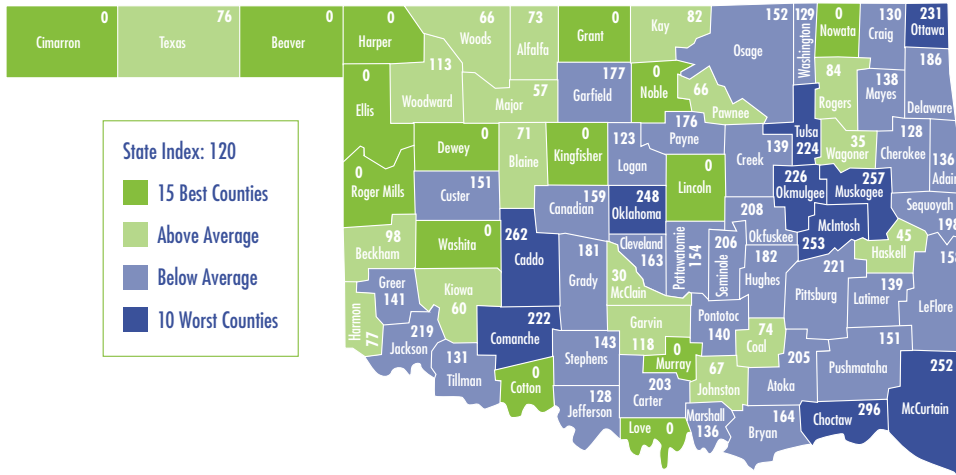

Disadvantaged Neighborhood Index

Oklahoma & Counties: 2000

- % of Children in Neighborhoods with High Child Poverty Rates (above 29.5%)
- % of Children in Neighborhoods with High Rates of Single Parent Families Headed by Females (above 30.9%)
- % of Children in Neighborhoods with High Rates of High School Dropouts (above 15.0%)
- % of Children in Neighborhoods with High Rates of Males Not in the Labor Force (32.9%)

(46.3%, McCurtain County) of the children live where it is more common than usual for neighborhood families to be headed by a single mother, up to half (49.8%, McCurtain County) of the children live with neighbors who are more likely than normal to be high school dropouts, and up to thirty-nine percent (39.0%, Choctaw County) of the children live where high rates of men don't work. More limitations than possibilities may be established for young people through their experiences living in those neighborhoods.

With indexes of 224 for Tulsa County and 248 for Oklahoma County, the state's two large metropolitan counties fall within the worst ten counties.

Conclusion

This 2003 CENSUS EDITION of the Oklahoma KIDS COUNT Factbook uses the latest decennial census data (Census 2000) to provide the most comprehensive state and county information available about individual children, children in their families and children in their neighborhoods. While the Census Bureau continues its efforts to improve the data becoming available between each decade's census, much of the data collected and displayed on these pages will not be comprehensively updated with this level of detail for many years to come.

beyond. This baseline, future Census Bureau data releases and the Oklahoma KIDS COUNT Factbook's continual tracking of benchmarks which measure the well-being of Oklahoma children over time and across counties will blend together the knowledge and information necessary for Oklahoma policy makers and advocates to enable each individual child to enjoy the benefits of a solid beginning, a successful childhood and an optimistic future.

The rich and complex picture of Oklahoma's children presented in these pages establishes a new baseline for the twenty-first century, and

White	[4,279]	89.8%
African American	[20]	0.4%
American Indian	[138]	2.9%
Asian & Hawaiian	[26]	0.5%
Other Single Race	[173]	3.6%
2 or More Races	[128]	2.7%

Poverty

	County	State
Number & percent of 3 and 4 year olds enrolled in nursery school, preschool or kindergarten	189 38.0%	42,258 45.5%
Number & percent of 5-15 year olds with a disability	89 3.0%	35,033 6.4%
Number & percent of 16-19 year olds not attending school and not working	180 15.6%	19,758 9.3%

Families

	County	State
Median income of families with children	\$40,521	\$38,579
Number & percent of families with children headed by a single parent	541 22.9%	119,914 27.1%
Number of grandparents raising their own grandchild as percent of householders age 30 and over	219 2.1%	39,279 2.1%

Neighborhoods

	County	State
Percent of children in neighborhoods with high poverty rates (above 29.5%)	0.0%	21.1%
Percent of children in neighborhoods with high rates of single parent families headed by females (above 30.9%)	0.0%	17.5%
Percent of children in neighborhoods with high rates of high school dropouts (above 15.0%)	20.5%	22.4%
Percent of children in neighborhoods with high rates of males not in the labor force (above 32.9%)	16.0%	6.7%

Understanding the Data

This is my game. My Dad got it for me for doing good at school. I ONLY get to play it when my homework is done.

Sometimes I let my little brother play. He likes it too.

County Profile Key A Comprehensive Guide to Understanding County Profiles

The map of Oklahoma has the location of the county highlighted.

The county seat is along the bottom of each map.

The county name is along the top of each county profile.

The proportion of all Oklahoma children who live in the county is here.

Each age is broken down by gender.

The number of children living in the county is listed for each single age, along with the percentage of all children in the county who are that age.

The total number of children in the county by age is here.

An additional count of older teens in the county is here.

Single years can be totaled to arrive at numbers or percentages for different groups of county children. For example:

“996, or 14.9% of all Adair County children are under the age of three.”

“541 young women age 15 through 17 reside in Adair County.”

Adair County

0.7% of Oklahoma's Children Live in Adair County

Population

AGE	# of children	% of all county children	Male	Female
< 1	305	4.8%	162	143
1	313	4.9%	149	164
2	328	5.2%	173	155
3	327	5.1%	185	142
4	310	4.9%	157	153
5	352	5.5%	176	176
6	333	5.2%	157	176
7	380	6.0%	185	195
8	410	6.4%	206	204
9	380	6.0%	192	188
10	369	5.8%	193	176
11	359	5.6%	184	175
12	350	5.5%	180	170
13	357	5.6%	187	170
14	376	5.9%	181	195
15	371	5.8%	190	181
16	343	5.4%	181	162
17	405	6.4%	207	198
0-17	6,368	100.0%	3,245	3,123
18	302	n/a	158	144
19	281	n/a	124	157

Children

	County	State
Number & percent of 3 and 4 year olds enrolled in nursery school, preschool or kindergarten	284 43.6%	42,258 45.5%
Number & percent of 5-15 year olds with a disability	209 5.3%	35,033 6.4%
Number & percent of 16-19 year olds not attending school and not working	163 12.9%	19,758 9.3%

Poverty

Families

	County	State
Median income of families with children	\$27,998	\$38,579
Number & percent of families with children headed by a single parent	736 25.8%	119,914 27.1%
Number of grandparents raising their own grandchild as percent of householders age 30 and over	409 3.7%	39,279 2.1%

Neighborhoods

	County	State
Percent of children in neighborhoods with high poverty rates (above 29.5%)	45.3%	21.1%
Percent of children in neighborhoods with high rates of single parent families headed by females (above 30.9%)	18.4%	17.5%
Percent of children in neighborhoods with high rates of high school dropouts (above 15.0%)	0.0%	22.4%
Percent of children in neighborhoods with high rates of males not in the labor force (above 31.9%)	0.0%	6.7%

The dark colored narrow bar on the bar chart shows child poverty rates for county children in several different groups. The lighter colored wider bar behind the narrow bar is the state poverty rate for that group of children and allows you to compare the county with the state as a whole.

The rate and number of poor children in each group is here.

The number and percent of children within each race is displayed on the pie chart.

The number and percent of Hispanic or Latino children, counted as a nationality, is listed next to the race pie chart.

Information about children, their families and the neighborhoods in which they live is displayed to the left of the comparable state information. See methodology and sources for a detailed explanation of each indicator.

Interpreting the Data

Understand What is Being Measured:

It is important to understand what is being measured and how. Several types of Census 2000 data and information derived from Census 2000 are available for the state and each county: full counts, weighted estimates, numbers, percentages, county and state rates, and county rankings. A “key” directing the reader to the various types of data information is presented at the beginning of this *Understanding The Data* section. The *Methodology And Sources* later in this section details what each item on the county profiles means, what data is included and its source.

Beware of Small Numbers:

County populations vary significantly. Such variations should be considered when interpreting the differences among counties. Be aware that small counties may have a small number of people in a given category (e.g., children with disabilities, grandparents raising grandchildren) which can cause the rate and percentage to vary considerably from county to county without reflecting significant differences.

Low rates may appear in counties with large populations. Relying solely on rates, without considering the numbers involved, may result in overlooking locations which have large numbers of suffering children.

Of particular importance when working with Census data is to understand that numbers and rates for the same or similar variables in very small areas may differ slightly depending on whether full counts are used or whether sample data which has been weighted to reflect a close estimate of the full count is used.

Census data may not be reported at all for very small areas with very small numbers. To protect the confidentiality of those responding to the

Census 2000, the US Census Bureau withholds data if they represent a population within a geographic area so small that the numbers might identify someone.

Remember the Uses and Limits of Data:

Profiles provide important baseline information. Effective use of profiles requires them to be understood in a broad context. They provide one way to describe a county or the state. Profiles can provide the starting place to initiate dialogue with others who share your interest. There are many important perspectives required to piece together a complete picture. Collect additional data and viewpoints to flesh out the most useful view of children and child well-being in your own area.

Methodology And Sources

Data and information used in the 2003 CENSUS EDITION of the Oklahoma KIDS COUNT FACTBOOK came exclusively from the latest decennial census (Census 2000) undertaken and made available by the US Census Bureau, United States Department of Commerce.

Census 2000 is a sophisticated tool which counted and collected information about almost three and one-half million (3,450,654) Oklahomans. Taken on April 1, 2000, Census 2000 asked seven questions of each Oklahoma household: name, sex, age, relationship, Hispanic origin, race and whether the housing unit was owned or rented. In addition to these seven questions, about one of every six households got a much longer questionnaire including queries about size of the household, income, disability, school enrollment, educational attainment, employment status, grandparents as caregivers and much more. The specific rate of households receiving the longer questionnaire varied from one in two in some smaller areas, to one in eight in more densely populated areas. Before it is reported

the sample of households is weighted by the Census Bureau to reflect the entire population. This process enables the collection and calculation of detailed data and good quality estimates for large numbers of people.

A disadvantage of this process is that, for smaller geographic areas and for some subcategories (such as age and race), the counts generated from the sample data will not always precisely match the counts reported by the full count. For example, the full count from Census 2000 reports 6,368 children living in Adair County, Oklahoma. The weighted sample generates an estimate of 6,410 for the same area. Small differences may appear in the 2003 CENSUS EDITION of the Oklahoma KIDS COUNT FACTBOOK (and other publications using federal census data) as a result of the weighting process. All estimates derived from sample data contain some amount of random error.

The full counts from Census 2000 are reported on the *Census of the Population and Housing*, Summary Files 1 and 2. The estimates generated by weighting the sample data from Census 2000 are reported on the *Census of the Population and Housing*, Summary Files 3 and 4. Exercise caution when comparing data from Summary File 1 or 2 with data from Summary File 3 or 4.

The combination of the full counts (Summary Files 1 and 2) and the socio-economic estimates (Summary File 3) enables the development of this detailed profile of Oklahoma’s children on a state and county level. The data from Summary Files 1, 2 and 3 used to create the state and county profiles in Oklahoma KIDS COUNT 2003 is also collected by the US Census Bureau for other Oklahoma geographical areas, such as metropolitan areas, cities and towns, census tracts, and blocks. This *Methodology And Sources* section identifies the specific Census 2000 Summary File and Tables providing the information found in this document and the method used for computations where applicable.

Child Population is the total resident population under age eighteen (18) including dependents of Armed Forces personnel stationed in the area. Child population for the state and counties is reported by age by single years. Additionally counts of young adults who are eighteen (18) and nineteen (19) years old are reported. Each single year age group is reported as a percentage of all children under age eighteen (18) living in the state or county. Child population for each single year age and for all children is reported by gender. All children under the age of eighteen (18) living in each county are reported as a percentage of all the children living in the state, to display the percentage of Oklahoma’s children living in the county.

Source: *Data provided by Oklahoma State Data Center, Planning and Research Division, Oklahoma Department of Commerce (ODOC), using U.S. Bureau of the Census, Census of the Population and Housing 2000, Summary File 1, Table 12.*

Child Poverty counts the related children under age eighteen (18) who live in families with incomes below the U.S. poverty threshold. **Related Child** is the child related to the “family head” by birth, marriage or adoption and includes relatives such as nieces and nephews. Children under age eighteen (18) who do not live in a household where they are related to the head of the household, such as foster children, are not included in this analysis. Data counts poor related children calculated as a percent of all related children. While Census 2000 contains detailed data and good quality estimates for very small areas, understanding and explaining the numbers and percentages becomes increasingly troublesome when viewing overlapping characteristics (such as poverty among Asian children under the age of five living in a family headed by the mother only). It is important to remember that poverty data from Census 2000 is one of the items generated by weighting the Census 2000 sample data (Summary File 3) which, as explained in the introduction, will not always precisely match the counts reported by the

full count. The combination of the differences resulting from the weighting process and the differences resulting from not including unrelated children among those for whom poverty status is determined often confuses those looking closely at data from small areas or for small subcategories. The following example using Adair County data is offered to help the user understand the precise meaning of the data presented.

- The full count (Summary File 1) from Census 2000 reports **6,368** children living in Adair County, Oklahoma.
- The weighted sample (Summary File 3) generates an estimate of **6,410** children living in Adair County, Oklahoma.
 - Of these **6,410** children, poverty is determined only for the **6,126** Adair County children who are related to the “family head” by birth, marriage or adoption and include relatives such as nieces and nephews.
- The Summary File 3 estimate of **284** children living in Adair County, Oklahoma, who do not live in a household in which they are related to the head of the household are not included in the poverty analysis.
- The Summary File 3 estimates **1,759** poor children living in Adair County, generating a child poverty rate of **28.7%**, which means **28.7%** of the **6,126** related children (*not 28.7% of the estimate of 6,410 generated from the Summary File 3 sample nor 28.7% of the full count of 6,368 from Summary File 1*).

Updated annually using the Consumer Price Index, the **Poverty Threshold**, as defined by the U.S. Bureau of the Census, is based upon the amount of money that is required to purchase a nutritionally adequate diet. A family is classified as poor if its income falls below the 1999 minimum standard for its size. For the purposes of Census 2000, a single adult with one child would be counted as poor if their

income fell below \$957 per month (or \$11,483 per year); with two children below \$1,119 per month (or \$13,423 per year); with three children below \$1,413 per month (or \$16,954 per year). Extreme poverty, discussed as living on an income equal to or less than one-half (50.0%) of the poverty threshold, would for the single parent with three children be an income of one-half of \$1,413 (or \$706.50) per month, or less. As a result of updates using the Consumer Price Index, the poverty threshold changes annually. For example, the latest poverty threshold (calculated for 2002) for a single parent with two children is raised by \$89 per month. As a result in 2002 that family would be counted as poor if their income fell below \$1,208 per month (or \$14,494 per year). **Children in Extreme Poverty** counts the related children under age eighteen (18) and in several age groups (under age 5, age 5 through 11, and age 12 through 17) who live in families with incomes below one-half (50.0%) of the U.S. poverty threshold. **Percentage** is the number of children in extreme poverty in each age group displayed as a proportion of all children in those age groups. **Children in Poverty** counts the related children under age eighteen (18) and in several age groups (under age 5, age 5 through 11, and age 12 through 17) who live in families with incomes below one hundred percent (100.0%) of the U.S. poverty threshold. **Percentage** is the number of children in poverty in each age group displayed as a proportion of all children in those age groups. **Children in Poverty by Race/Nationality** counts the related children under age eighteen (18) and in several racial groups who live in families with incomes below one hundred percent (100.0%) of the U.S. poverty threshold. For purposes of this category race is displayed as “White,” “Black or African American,” “American Indian and Alaska Native,” “Asian, Hawaiian, Other Pacific Islander,” “Other (Single Race)” and “Two or More Races.” “Hispanic” is displayed as a nationality, rather than a race, in which children may be of any race. **Percentage** is the number of children in poverty in each race or nationality displayed as a proportion of all children in each race or nationality. **Children**

Living in Poverty in Married-Couple Families counts all related children or all non-White related children under both the of age eighteen (18) and the age of five (5) who live in married-couple families with incomes below one hundred percent (100.0%) of the U.S. poverty threshold. Non-White Children Living in Married Couple Families is calculated by subtracting all White children under age eighteen (18) or under age five (5) living in married-couple families from all children in the same age group living in married couple families. **Percentage** is the number of children under age eighteen (18) or under age five (5) in poverty in all married-couple families (or in all non-White married-couple families) displayed as a proportion of all children in the same age group in all married couple families (or in all non-White married-couple families). **Children Living in Poverty in Single Parent Families Headed by Males** counts all related children or all non-White related children under both the age eighteen (18) and the age of five (5) who live in single parent families headed by males with incomes below one hundred percent (100.0%) of the U.S. poverty threshold. **Non-White Children Living in Single Parent Families Headed by Males** is calculated by subtracting all White children under age eighteen (18) or under age five (5) living in single parent families headed by males from all children in the same age group living in single parent families headed by males. **Percentage** is the number of children under age eighteen (18) or under age five (5) in poverty in all single parent families headed by males (or in all non-White single parent families headed by males) displayed as a proportion of all children in the same age group in all single parent families headed by males (or in all non-White single parent families headed by males). **Children Living in Poverty in Single Parent Families Headed by Females** counts all related children or all non-White related children under both the age eighteen (18) and the age of five (5) who live in single parent families headed by females with incomes below one hundred percent (100.0%) of the U.S. poverty threshold. **Non-White Children Living in Single Parent Families Headed by Females** is calculated by subtracting all White

children under age eighteen (18) or under age five (5) living in single parent families headed by females from all children in the same age group living in single parent families headed by females. **Percentage** is the number of children under age eighteen (18) or under age five (5) in poverty in all single parent families headed by females (or in all non-White single parent families headed by females) displayed as a proportion of all children in the same age group in all single parent families headed by females (or in all non-White single parent families headed by females). **State Ranking** compares the rate of poverty among children under age eighteen (18) from best (1) to worst (50) in all states. **County Ranking** compares the rate of poverty in the general population, the rate of poverty among children under the age of eighteen (18), the rate of poverty among children of different ages, the rate of poverty among children under the age of eighteen (18) of different races, the rate of poverty among Hispanic children under the age of eighteen (18), and the rate of poverty among children of different ages and races by family type from best (1) to worst (77) in all Oklahoma counties (see also, *Comprehensive County Rankings*, located at the end of this *Understanding The Data* section).

Source: Data provided by the Oklahoma State Data Center, Planning and Research Division, Oklahoma Department of Commerce (ODOC), using U.S. Bureau of the Census, *Census of the Population and Housing 2000, Summary File 3, Table PCT50 (Poverty by Age by Ratio), Tables P87 and P150A through PCT1591 (Poverty by Age by Race/Nationality), and Tables PCT52 and PCT76A through PCT76I (Child Poverty by Family Type by Race/Nationality)*.

Child Race displays the racial origins identified by Oklahomans for their children. **Hispanic Origin** is considered by Census 2000 to be a concept separate and distinct from race. **Hispanic** is a nationality, rather than a race, so children categorized as Hispanic by Census 2000 may be of any race. Extreme caution should be used when reviewing, using and comparing race data and data

counting Hispanic and Latino children. The terms “Hispanic” and “Latino” are used interchangeably by the Census 2000. There is often disagreement about the specific terminology or the number of categories which should be used to classify race and ethnicity. The categories listed in this report are the categories used by Census 2000 which were relied upon for this information. *Persons within each race or ethnic group are encouraged to re-title or refer to the data in a manner which reflects their preferences.* Census 2000 uses the following five individual race categories: “White,” “Black or African American,” “American Indian and Alaska Native,” “Asian” and “Native Hawaiian and Other Pacific Islander.” A category entitled “some other race” was included for respondents who were unable to identify with the listed race categories. For the first time in a decennial census respondents were given the option of selecting one or more race categories to indicate their racial identity. Less than one-tenth of one percent (0.08%) of Oklahoma’s child population is identified as “Native Hawaiian and Other Pacific Islander.” More than one-third of Oklahoma’s counties (37.7%, or 29 of 77) had no children identified as “Native Hawaiian and Other Pacific Islander.” More than three-quarters (77.9%, or 60 of 77) recorded five or fewer children identified as “Native Hawaiian and Other Pacific Islander.” Because of the small numbers in Oklahoma, for purposes of reporting and display, Oklahoma KIDS COUNT Factbook 2003 combines the racial categories of “Native Hawaiian and Other Pacific Islander” and “Asian” as was done in Census 1990. **Percentage** is the number of children in each race displayed as a proportion of all children under the age of eighteen (18) and the number of children who are Hispanic or Latino displayed as a proportion of all children under the age of eighteen (18).

Source: Data provided by the Oklahoma State Data Center, Planning and Research Division, Oklahoma Department of Commerce (ODOC), using U.S. Bureau of the Census, *Census of the Population and Housing 2000, Summary File 1, Tables P12 and P12 A through P12H.*

Children in Neighborhoods With High Poverty Rates displays the share of children under the age of eighteen (18) who reside in a neighborhood with a high child poverty rate. **Neighborhood** for the purpose of this analysis is equivalent to a census tract. **Census Tract** is a small, relatively permanent statistical subdivision of a county, city, or other geographical configuration delineated by the US Census Bureau for data presentation purposes. Each census tract generally contains between one thousand (1,000) and eight thousand (8,000) people with its boundaries drawn to follow relatively permanent visible features (such as rivers and highways) so it will remain relatively stable (like a neighborhood). Sometimes a census tract boundary is a city limit or some other invisible feature. A census tract boundary might cross a city or town limit, but never cross county or state lines. **High Child Poverty Rate** for the purposes of this analysis is a rate of 29.5% or higher which represents one and one-half times the Oklahoma child poverty rate (19.6%). **Percentage** is the number of children under the age of eighteen (18) living in a neighborhood with a high poverty rate displayed as a proportion of all children under age eighteen (18) living in the state or county. **County Ranking** compares the rate of children under the age of eighteen (18) who reside in a neighborhood with a high child poverty rate from best (1) to worst (50) in all Oklahoma counties (see also, *Comprehensive County Rankings*, located at the end of this *Understanding The Data* section).

Source: Data provided by the Oklahoma State Data Center, Planning and Research Division, Oklahoma Department of Commerce (ODOC), using U.S. Bureau of the Census, *Census of the Population and Housing 2000, Summary File 3, Tables P8 (Population) and PCT50 (Poverty).*

Children in Neighborhoods With High Rates of High School Dropouts displays the share of children under the age of eighteen (18) who reside in a neighborhood with a high rate of persons age sixteen (16) through nineteen (19) who are not enrolled in school and are not high school graduates. Persons who have

a GED are considered high school graduates in this measure. This US Census Bureau method of measuring high school dropouts is the “status dropout” rate used by the National Center for Educational Statistics (NCES) and differs substantially from the Oklahoma “rate of dropout” method as defined by state statute which is tracked in other Oklahoma KIDS COUNT Factbooks. **Neighborhood** for the purpose of this analysis is equivalent to a census tract. **Census Tract** is a small, relatively permanent statistical subdivision of a county, city, or other geographical configuration delineated by the US Census Bureau for data presentation purposes. Each census tract generally contains between one thousand (1,000) and eight thousand (8,000) people with its boundaries drawn to follow relatively permanent visible features (such as rivers and highways) so it will remain relatively stable (like a neighborhood). Sometimes a census tract boundary is a city limit or some other invisible feature. A census tract boundary might cross a city or town limit, but never cross county or state lines. **High Rate of High School Dropouts** for the purposes of this analysis is a rate of 15.0% or higher which represents one and one-half times the Oklahoma rate of high school dropouts (10.0%). **Percentage** is the number of children under the age of eighteen (18) living in a neighborhood with a high rate of high school dropouts displayed as a proportion of all children under age eighteen (18) living in the state or county. **County Ranking** compares the rate of children under the age of eighteen (18) who reside in a neighborhood with a high rate of high school dropouts from best (1) to worst (77) in all Oklahoma counties (see also, *Comprehensive County Rankings*, located at the end of this *Understanding The Data* section).

Source: Data provided by the Oklahoma State Data Center, Planning and Research Division, Oklahoma Department of Commerce (ODOC), using U.S. Bureau of the Census, *Census of the Population and Housing 2000, Summary File 3, Tables P8 (Population) and P38 (High School Dropouts).*

Children in Neighborhoods With High Rates of Males Not in the Labor Force displays the share of children under the age of eighteen (18) who reside in a neighborhood with a high rate of males age sixteen (16) through sixty-four (64) who are not in the labor force. **Neighborhood** for the purpose of this analysis is equivalent to a census tract. **Census Tract** is a small, relatively permanent statistical subdivision of a county, city, or other geographical configuration delineated by the US Census Bureau for data presentation purposes. Each census tract generally contains between one thousand (1,000) and eight thousand (8,000) people with its boundaries drawn to follow relatively permanent visible features (such as rivers and highways) so it will remain relatively stable (like a neighborhood). Sometimes a census tract boundary is a city limit or some other invisible feature. A census tract boundary might cross a city or town limit, but never cross county or state lines. **High Rate of Males Not in the Labor Force** for the purposes of this analysis is a rate of 32.9% or higher which represents one and one-half times the Oklahoma rate of males not in the labor force (21.9%). **Percentage** is the number of children under the age of eighteen (18) living in a neighborhood with a high rate of males not in the labor force displayed as a proportion of all children under age eighteen (18) living in the state or county. **County Ranking** compares the rate of children under the age of eighteen (18) who reside in a neighborhood with a high rate of males not in the labor force from best (1) to worst (77) in all Oklahoma counties (see also, *Comprehensive County Rankings*, located at the end of this *Understanding The Data* section).

Source: Data provided by the Oklahoma State Data Center, Planning and Research Division, Oklahoma Department of Commerce (ODOC), using U.S. Bureau of the Census, *Census of the Population and Housing 2000, Summary File 3, Tables P8 (Population) and PCT35 (Labor Force).*

Children in Neighborhoods With High Rates of Single Parent Families Headed By Females displays the share of children under the age of eighteen (18) who reside in a neighborhood with a high rate of families headed by a single female with no husband present. **Neighborhood** for the purpose of this analysis is equivalent to a census tract. **Census Tract** is a small, relatively permanent statistical subdivision of a county, city, or other geographical configuration delineated by the US Census Bureau for data presentation purposes. Each census tract generally contains between one thousand (1,000) and eight thousand (8,000) people with its boundaries drawn to follow relatively permanent visible features (such as rivers and highways) so it will remain relatively stable (like a neighborhood). Sometimes a census tract boundary is a city limit or some other invisible feature. A census tract boundary might cross a city or town limit, but never cross county or state lines. **High Rate of Families Headed by a Single Female** for the purposes of this analysis is a rate of 30.9% or higher which represents one and one-half times the Oklahoma rate of families headed by a single female with no husband present (20.6%). **Percentage** is the number of children under the age of eighteen (18) living in a neighborhood with a high rate of families headed by a single female displayed as a proportion of all children under age eighteen (18) living in the state or county. **County Ranking** compares the rate of children under the age of eighteen (18) who reside in a neighborhood with a high rate of families headed by a single female from best (1) to worst (77) in all Oklahoma counties (see also, *Comprehensive County Rankings*, located at the end of this *Understanding The Data* section).

Source: Data provided by the Oklahoma State Data Center, Planning and Research Division, Oklahoma Department of Commerce (ODOC), using U.S. Bureau of the Census, *Census of the Population and Housing 2000, Summary File 3, Tables P8 (Population) and P10 (Household Type)*.

Disadvantaged Neighborhood Index combines and totals for each county its four

neighborhood rankings (the proportion of its children who reside in a neighborhood with a high child poverty rate, the proportion of its children who reside in a neighborhood with a high rate of families headed by a single female, the proportion of its children who reside in a neighborhood with a high rate of high school dropouts, and the proportion of its children who reside in a neighborhood with a high rate of males not in the labor force). The higher the resulting number, the more disadvantaged the neighborhoods in which large proportions of their children live. Counties with a Disadvantaged Neighborhood Index of “0” have none of their children living in any of the four types of high rate neighborhoods. Counties with a very high Disadvantaged Neighborhood Index (up to 296) have large proportions of their children living in more than one type of high rate neighborhoods. For example, a large proportion of its children might live in a neighborhood with a high rate of families headed by a single female and a high proportion of its children might live in a neighborhood with a high rate of males not in the labor force. These different high rates may be in the same neighborhood (causing multiple disadvantage to the children living in that neighborhood) or may be in different neighborhoods (dispersing the disadvantages among a larger number of county children). **County Ranking** compares the Disadvantaged Neighborhood Index from best (1) to worst (77) in all Oklahoma counties (see also, *Comprehensive County Rankings*, located at the end of this *Understanding The Data* section).

Source: Data provided by the Oklahoma State Data Center, Planning and Research Division, Oklahoma Department of Commerce (ODOC), using U.S. Bureau of the Census, *Census of the Population and Housing 2000, Summary File 3, Tables P8 (Population), P38 (High School Dropouts), PCT35 (Labor Force), PCT50 (Poverty), and P10 (Household Type)*.

Early Childhood Care and Education is used as the framework for discussions about prenatal care, early parenting, early brain development, early child care, preschool education and other

topics which combine to create an environment for infants, toddlers and preschool children impacting each child’s ability to achieve his or her full potential. SEE Oklahoma KIDS COUNT Factbook 2001 for additional information.

Families with Children Headed by a Single Parent counts all families with their own children under the age of eighteen (18) living in a household headed by a person – male or female – without a spouse present in the home. **Own Children** includes never-married persons under the age of eighteen (18) who are the sons or daughters of the person who is the head of the household. The householder’s stepchildren and adopted children are counted as “own children.” **Percentage** is the number of families with their own children under the age of eighteen (18) headed by a single person without a spouse present in the home displayed as a proportion of all families with their own children under the age of eighteen (18), including both households headed by a single person and households with married couples. **State Ranking** compares the rate of families with children under age eighteen (18) which are headed by a single person from best (1) to worst (50) in all states. **County Ranking** compares the rate of families with children under age eighteen (18) which are headed by a single person from best (1) to worst (77) in all Oklahoma counties (see also, *Comprehensive County Rankings*, located at the end of this *Understanding The Data* section).

Source: Data provided by the Oklahoma State Data Center, Planning and Research Division, Oklahoma Department of Commerce (ODOC), using U.S. Bureau of the Census, *Census of the Population and Housing 2000, Summary File 3, Table PCT10*.

Five to Fifteen Year Olds with a Disability counts the number of children age five (5) through fifteen (15) who have some type of long-lasting condition or disability. This count does not include children who are institutionalized. A **Long-Lasting Condition** includes **Sensory** disabilities (blindness, deafness, or a severe

vision or hearing impairment) or a **Physical Condition** that substantially limits one or more basic activities such as walking, climbing stairs, reaching, lifting or carrying. A **Disability** (for a person under the age of 16) is a condition lasting six (6) months or longer and includes **Mental** disabilities (cognitive difficulty learning, remembering or concentrating), **Self-Care** disabilities (difficulty dressing or bathing) and **Physical** disabilities (difficulty getting around inside the home). A child with two or more of any type of disability (sensory, physical, mental or self-care) is classified as having **Multiple** disabilities. **Percentage** is the number of non-institutionalized children age five (5) through fifteen (15) who have one or more disabilities or long-lasting conditions displayed as a proportion of all non-institutionalized children age five (5) through fifteen (15). **State Ranking** compares the rate of children age five (5) through fifteen (15) who have a disability from low (1) to high (50) in all states. **County Ranking** compares the rate of children age five (5) through fifteen (15) who have a disability from low (1) to high (2) in all Oklahoma counties (see also, *Comprehensive County Rankings*, located at the end of this *Understanding The Data* section).

Source: Data provided by the Oklahoma State Data Center, Planning and Research Division, Oklahoma Department of Commerce (ODOC), using U.S. Bureau of the Census, *Census of the Population and Housing 2000, Summary File 3, Table PCT26*.

Grandparents Raising Their Own Grandchildren counts the number of grandparents who live with and have the primary responsibility for raising their own grandchildren. **Primary Responsibility** means being responsible for most of the child’s basic needs. **Own Grandchildren** includes never-married persons under the age of eighteen (18) who are the children (including stepchildren and adopted children) of the sons and daughters of the grandparent. **Percentage** is the number of grandparents raising their own grandchild displayed as a proportion of the householders age thirty (30) or over. **State**

Ranking compares the rate of grandparents living with their own grandchild who are primarily responsible for that grandchild and the rate of householders age thirty (30) and older who are grandparents raising their own grandchild from low (1) to high (50) in all states. **County Ranking** compares the rate of householders age thirty (30) and older who are grandparents raising their own grandchild from low (1) to high (77) in all Oklahoma counties (see also, *Comprehensive County Rankings*, located at the end of this *Understanding The Data* section).

Source: *Data provided by the Oklahoma State Data Center, Planning and Research Division, Oklahoma Department of Commerce (ODOC), using U.S. Bureau of the Census, Census of the Population and Housing 2000, Summary File 3, Table PCT8.*

Median Income of Families with Children is the median annual income for families with related children. **Related Child** is the child related to the “family head” by birth, marriage or adoption and includes relatives such as nieces and nephews. The incomes of families with children under age eighteen (18) who are not related to the head of the household, such as foster children, are not included in this analysis. **Median Income** is the dollar amount that divides the income distribution into two equal groups – half with incomes above the median, half with incomes below the median. **State Ranking** compares median income from best (1) to worst (50) in all states. **County Ranking** compares median income from best (1) to worst (77) in all Oklahoma counties (see also, *Comprehensive County Rankings*, located at the end of this *Understanding The Data* section).

Sixteen to Nineteen Year Olds Not

Attending School and Not Working counts the number of youth age sixteen (16) through nineteen (19) who are not enrolled in school (full-time or part-time) and are not employed (full-time or part-time). Youth age sixteen (16) through nineteen (19) in the military are counted as employed. Youth not in school and not working are sometimes referred to as **Idle Teens or Disconnected Youth**, reflecting young people who are not engaged in either of the core activities that usually occupy people at this time of their life. **Percentage** is the number of youth age sixteen (16) through nineteen (19) who are not enrolled in school (full-time or part-time) and are not employed (full-time or part-time) displayed as a proportion of all youth age sixteen (16) through nineteen (19). **State Ranking** compares the rate of youth age sixteen (16) through nineteen (19) who are not enrolled in school and are not employed from best (1) to worst (50) in all states. **County Ranking** compares the rate of idle teens from best (1) to worst (2) in all Oklahoma counties (see also, *Comprehensive County Rankings*, located at the end of this *Understanding The Data* section).

Source: *Data provided by the Oklahoma State Data Center, Planning and Research Division, Oklahoma Department of Commerce (ODOC), using U.S. Bureau of the Census, Census of the Population and Housing 2000, Summary File 3, Table PCT38.*

Three and Four Year Olds Enrolled in Nursery School, Preschool or Kindergarten counts the number of children age three (3) and four (4) who were enrolled in nursery school, preschool or kindergarten during the fall school term prior to the 1st day of April, 2000. **Nursery School and Preschool** are any group or class of instruction providing educational experiences for children during the years preceding kindergarten, including places where instruction is an integral part of the program, but excluding private homes that primarily provide custodial care. Children enrolled in preschool programs sponsored by federal, state or local agencies (including Head Start) are included. Percentage is the number of children

age three (3) and four (4) enrolled in nursery school, preschool or kindergarten displayed as a proportion of all children age three (3) and four (4). **State Ranking** compares the rate of children age three (3) and four (4) enrolled in nursery school, preschool or kindergarten from low (1) to high (50) in all states. **County Ranking** compares the rate of children age three (3) and four (4) enrolled in nursery school, preschool or kindergarten from low (1) to high (77) in all Oklahoma counties (see also, *Comprehensive County Rankings*, located at the end of this *Understanding The Data* section).

Source: *Data provided by the Oklahoma State Data Center, Planning and Research Division, Oklahoma Department of Commerce (ODOC), using U.S. Bureau of the Census, Census of the Population and Housing 2000, Summary File 3, Table PCT23.*

Welfare Reform is used as the term for the federal policy changes put in place after the passage of *The Personal Responsibility and Work Opportunity Reconciliation Act of 1996*. SEE Oklahoma KIDS COUNT Factbook 2002 for additional information.
